Preface

Webster's New Collegiate Dictionary is a completely new volume in the Merriam-Webster series of dictionaries. It is a general dictionary edited for use in school or college, in the office, and in the home—in short, wherever information about English words is likely to be sought. The average user should rarely have occasion to look for information about the vocabulary of present-day English that is not available within these pages.

The first Merriam-Webster Collegiate appeared in 1898 and quickly won the esteem of student and general reader. A second edition was published in 1910, and subsequent editions came out in 1916, 1931, 1936, 1949, and 1963. This eighth in the series incorporates the best of the time-tested features of its predecessors and introduces new features designed to add to its usefulness. Its more than 1500 pages make it the most comprehensive Merriam-Webster Collegiate ever published.

The heart of Webster's New Collegiate Dictionary is the more than 1300 pages given over to the A-Z vocabulary. The information there set down derives not only from the 10,000,000 citations which were available to the editors of Webster's Third New International Dictionary and the 1963 Collegiate but also from the considerably more than 1,000,000 citations collected since the publication of these books. Thus each entry is based on a constantly updated file of actual English usage.

Those entries known to be trademarks or service marks are so labeled and are treated in accordance with a formula approved by the United States Trademark Association. No entry in this dictionary, however, should be regarded as affecting the validity of any trademark or service mark.

A noteworthy feature of the vocabulary section is the nearly 900 pictorial illustrations, many of which

were drawn especially for this book. These illustrations were selected not simply for their decorative function but particularly for their value in clarifying definitions.

The front matter—those pages preceding the A-Z vocabulary—contains two important sections. The Explanatory Notes should be read by every user of the dictionary since a thorough understanding of the information contained in them will contribute markedly to the value of this book. And all users of the dictionary are urged to read the lucid essay on the English language which was written for this Collegiate by Professor W. Nelson Francis of Brown University.

The back matter—those pages following the A-Z vocabulary—contains several sections that dictionary users have long found helpful. These include more than five hundred Foreign Words and Phrases that occur frequently in English texts but that have not become part of the English vocabulary; several thousand proper names that are entered under the separate headings Biographical Names and Geographical Names; and a list of the Colleges and Universities of the United States and Canada. There is also a Handbook of Style in which various stylistic conventions (as of punctuation and capitalization) are concisely summarized.

Webster's New Collegiate Dictionary has been edited by the trained staff of the G. & C. Merriam Co. It is the result of a collaborative effort, and it would be invidious to single out particular editors for special mention. At the same time, it would be ungracious to observe the anonymity which is often the lot of the present-day lexicographer, and so a list of those who contributed substantially to the completion of this book is printed below.

Webster's New Collegiate Dictionary is the product of a company that has been publishing dictionaries for more than 125 years. It is offered to the user with the conviction that it will serve him well.

Explanatory Notes

Entries

A boldface letter or a combination of such letters set flush with the left-hand margin of each column of type is a main entry. The main entry may consist of letters set solid, of letters joined by a hyphen, or of letters separated by one or more spaces:

teach . . . *vb*
teach-in . . . *n*
teaching fellow *n*

The material in lightface type that follows each main entry on the same line and on succeeding indented lines explains and justifies its inclusion in the dictionary.

The main entries follow one another in alphabetical order letter by letter: *book of account* follows *bookmobile*. Those containing an Arabic numeral are alphabetized as if the numeral were spelled out: *3-D* comes between *three-color* and *three-decker*. Those derived from proper names beginning with abbreviated forms of *Mac-* are alphabetized as if spelled *mac-*: *McCoy* comes after *macaroon* and before *mace*. Those that often begin with the abbreviation *St.* in common usage have the abbreviation spelled out: *Saint Martin's summer*.

A pair of guide words is printed at the top of each page. These indicate that the entries falling alphabetically between the words at the top of the outer column of each page are found on that page.

The guide words are the alphabetically first and usually the alphabetically last entries on the page:

acacia • acceptable

Occasionally the last printed entry is not the alphabetically last entry. On page 237, for example, *connective tissue* is the last printed entry, but *connectivity*, run on at the first homograph *connective*, is the alphabetically last entry and is therefore the second guide word. The alphabetically last entry is not used, however, if it follows alphabetically the first guide word on the succeeding page. Thus on page 124 *bonder* is not a guide word because it follows alphabetically the entry *bonded*, which is the first guide word on page 125. Any boldface word—a main entry with definition, a variant, an inflected form, a defined or undefined run-on, or an entry in a list of self-explanatory words—may be used as a guide word.

When one main entry has exactly the same written form as another, the two are distinguished by superscript numerals preceding each word:

¹man . . . *n* ¹quail . . . *n*
²man . . . *vi* ²quail . . . *vb*

Sometimes such homographs are related. The two entries *man* are derived from the same root. Sometimes there is no relationship: the two entries *quail* are unrelated.

beyond the accident of spelling. The order of homographs is usually historical: the one first used in English is entered first.

Words precede word elements made up of the same letters; solid compounds precede hyphenated compounds; hyphenated compounds precede open compounds; and lowercase entries precede those with an initial capital:

mini . . . *n*
mini- *comb form*
work up . . . *n*
work-up . . . *n*
work up . . . *vi*
ti ta-nia . . . *n*
Ti ta-nia . . . *n*

The centered periods within entry words indicate division points at which a hyphen may be put at the end of a line of print or writing. Thus the noun *re-frig-er-a-tor* may be ended on one line with:

re-
refrig-
refriger-
refrigera-
and continued on the next with:
frigerator
erator
ator
tor

Centered periods are not shown after a single initial letter or before a single terminal letter because printers seldom cut off a single letter:

aplomb . . . *n*
hoary . . . *adj*
idea . . . *n*

Nor are they shown at second and succeeding homographs unless these differ among themselves:

¹mas-ter . . . *n* ¹till-er
²master . . . *vi* ²till-er
³master *adj* ³till-er

There are acceptable alternative end-of-line divisions just as there are acceptable variant spellings and pronunciations. It is, for example, all but impossible to produce a convincing argument that either of the divisions *aus-ter-i-ty*, *au-ster-i-ty* is better than the other. But space cannot be taken for entries like *aus-ter-i-ty* or *au-ster-i-ty*, and *aus-ter-j-ty* would likely be confusing to many. No more than one division is, therefore, shown for any entry in this dictionary.

Many words have two or more common pronunciation variants, and the same end-of-line division is not always appropriate for each of them. The division *pi-an-ist*, for example, best fits the variant \pē-'an-əst\ whereas the division *pi-a-nist* best fits the variant \pē-ə-nəst\. In instances like this, the division falling farthest to the left is used, regardless of the order of the pronunciations:

pi a-nist \pē-'an-əst, 'pē-ə-nəst\

When a main entry is followed by the word *or* and another spelling, the two spellings are equal variants. Both are standard, and either one may be used according to personal inclination:

the-ater or the-atre

If two variants joined by *or* are out of alphabetical order, they remain equal variants. The one printed first is, however, slightly more common than the second:

coun-sel-or or coun-sel

When another spelling is joined to the main entry by the word *also*, the spelling after *also* is a secondary variant and occurs less frequently than the first:

lov-able also love-able

Secondary variants belong to standard usage and may be used according to personal inclination. If there are two secondary variants, the second is joined to the first by *or*. Once the word *also* is used to signal a secondary variant, all following variants are joined by *or*:

!Shake-spear-ean or Shake-spearian also
Shak-sper-ean or Shak-sperian

Variants whose spelling places them alphabetically more than a column away from the main entry are entered at their own alphabetical places and usually not at the main entry:

Cha-nu-kah .. var of HANUKKAH

rime, rimer, rimester var of RHYME, RHYMER, RHYMESTER

Variants having a usage label appear only at their own alphabetical places:

fla-vour chiefly Brit var of FLAVOR

agin .. dial var of AGAINST

To show all the stylings that are found for English compounds would require space that can be better used for other information. So this dictionary limits itself to a single styling for a compound:

week-end

red-eye

high school

When a compound is widely used and one styling predominates, that styling is shown. When a compound is uncommon or when the evidence indicates that two or three stylings are approximately equal in frequency, the styling shown is based on the analogy of parallel compounds.

A main entry may be followed by one or more derivatives or by a homograph with a different functional label. These are run-on entries. Each is introduced by a lightface dash and each has a functional label. They are not defined, however, since their meanings are readily derivable from the meaning of the root word:

?question vt — ques-tion-er n

!fun-ny . adj. — fun-ni-ly . adv — fun-ni-ness . n

mu-tant . adj. — mutant n

A main entry may be followed by one or more phrases containing the entry word or an inflected form of it.

These are also run-on entries. Each is introduced by a lightface dash but there is no functional label. They are, however, defined since their meanings are more than the sum of the meanings of their elements:

!call 'call' — call one's bluff :

?mend 'mend' — on the mend :

Defined phrases of this sort are run on at the entry constituting the first major element in the phrase. When there are variants, however, the run-on appears at the entry constituting the first major invariable element in the phrase:

!clock n — kill the clock or run out the clock :

!seed n — go to seed or run to seed :

Attention is called to the definition of *vocabulary entry* on page 1301. The term *dictionary entry* includes all vocabulary entries as well as all boldface entries in the separate sections of the back matter headed "Foreign Words and Phrases," "Biographical Names," "Geographical Names," and "Colleges and Universities."

Pronunciation

The matter between a pair of reversed virgules \ \ following the entry word indicates the pronunciation. The symbols used are explained in the chart printed inside the front and back covers of this dictionary and on page 32a. For a detailed discussion of these symbols and related matters, the serious student is referred to "A Guide to Pronunciation" in Webster's Third New International Dictionary.

A hyphen is used in the pronunciation to show syllabic division. These hyphens sometimes coincide with the centered periods in the entry word that indicate end-of-line division, sometimes they do not:

dis-cover \dis-'kav-ər\

!met-ric \me-'trik\

A high-set mark indicates major (primary) stress or accent; a low-set mark indicates minor (secondary) stress or accent:

rough-neck \raf-'nek\

The stress mark stands at the beginning of the syllable that receives the stress.

The presence of variant pronunciations indicates that not all educated speakers pronounce words the same way. A second-place variant is not to be regarded as less acceptable than the pronunciation that is given first. It may, in fact, be used by as many educated speakers as the first variant, but the requirements of the printed page are such that one must precede the other:

apri-cot \ap-rə-'kät, 'ä-prə-\

for-eign \fər-'en, 'fär-\

A variant that is appreciably less common than the preceding variant is preceded by the word *also*:

col-league \käl-'æg also -ig\

Sometimes a regional label precedes a variant:

!great \grät, South also 'gre(ə)t\

Symbols enclosed by parentheses represent elements that are present in the pronunciation of some speakers but are absent from the pronunciation of other speakers, elements that are present in some but absent from other utterances of the same speaker, or elements whose presence or absence is uncertain:

hap-pen . vt . hap-pen-ing \ˈhæp-(ə)niŋ\
 sat-is-fac-to-ry \sæt-əs-ˈfak-t(ə)ri\
 re-sponse \ri-ˈspɑn(t)s\

Thus, the parentheses at *happening* mean that there are some who pronounce the /ə/ between /p/ and /n/ and others who do not pronounce it.

When a main entry has less than a full pronunciation, the missing part is to be supplied from a pronunciation in a preceding entry or within the same pair of reversed virgules:

cham pi-on ship \-ship\
 Ma-dei-ra \mə-ˈdi-ə-, ˈder-\

The pronunciation of the first three syllables of *championship* is found at the main entry *champion*:

ˈcham pi-on \ˈcham-pi-ən\

The hyphens before and after /ˈder/ in the pronunciation of *Madeira* indicate that both the first and the last parts of the pronunciation are to be taken from the immediately preceding pronunciation.

In general, no pronunciation is indicated for open compounds consisting of two or more English words that have own-place entry:

kangaroo court *n*

Only the first entry in a sequence of numbered homographs is given a pronunciation if their pronunciations are the same:

ˈre-ward \ri-ˈwɔ(ə)rð\
 2reward

Pronunciations are shown for obsolete words only if they occur in Shakespeare:

clois tress \ˈkloɪ-strəs\ *n, obs*

The pronunciation of unpronounced derivatives and compounds run on at a main entry is a combination of the pronunciation at the main entry and the pronunciation of the suffix or final element as given at its alphabetical place in the vocabulary:

— oval *ness n*
 — over one's head

Thus, the pronunciation of *ovalness* is the sum of the pronunciations given at *oval* and *-ness*; that of *over one's head*, the sum of the pronunciation of the three elements that make up the phrase.

Partial pronunciations are usually shown when two or more variants have a part in common. When a variation of stress is involved, a partial pronunciation may be terminated at the stress mark which stands at the beginning of a syllable not shown:

di verse \di-ˈvɜrs, də-, ˈdi-\
 an-cho-ry \ˈæn-ˌtʃō-vē, ˈæn-\

In some cases the pronunciation of a word or compound shows no major (primary) stress. One such class of words includes those that occur in main entries only as elements of an open compound. The stress shown for these words is the usual stress in the compound and may be less than major (primary):

clum-ber spaniel \ˌklʌm-bər-\

In other contexts the word may have major (primary) stress, as in "Is that spaniel a clumber?"

Functional Labels

An italic label indicating a part of speech or some other functional classification follows the pronunciation or, if no pronunciation is given, the main entry. The eight traditional parts of speech are indicated as follows:

de-cep-tive . . . <i>adj</i>	war-den . . . <i>n</i>
hap-pi-ly . . . <i>adv</i>	of . . . <i>prep</i>
be-cause . . . <i>conj</i>	they . . . <i>pron</i>
hey . . . <i>interj</i>	re-lax . . . <i>vb</i>

If a verb is both transitive and intransitive, the labels *vt* and *vi* introduce the subdivisions:

pen-e-trate . . . *vb* . . . *vt* . . . ~ *vi*

A boldface swung dash ~ is used to stand for the main entry (as *penetrate*) and separate the subdivisions of the verb. If there is no subdivision, *vt* or *vi* takes the place of *vb*:

in-fect . . . *vt*
 2vacation *vi*

Labeling a verb as transitive, however, does not preclude occasional intransitive use (as in absolute constructions).

Other italicized labels used to indicate functional classifications that are not traditional parts of speech are:

alt . . . <i>abbr</i>	-ness . . . <i>n suffix</i>
tele- or tel- comb form	-ize . . . <i>vb suffix</i>
-onym . . . <i>n comb form</i>	Fe . . . <i>symbol</i>
-gen-ic . . . <i>adj comb form</i>	Fris-bee . . . <i>trademark</i>
1pro- . . . <i>prefix</i>	must . . . <i>verbal auxiliary</i>
Air Express . . . <i>service mark</i>	whoa . . . <i>vb imper</i>
1ic . . . <i>adj suffix</i>	me-seems . . . <i>vb impersonal</i>
2ly . . . <i>adv suffix</i>	

Two functional labels are sometimes combined:

zitch . . . *adj or n*
 1e-ga-to . . . *adv or adj*

Inflected Forms

NOUNS

The plurals of nouns are shown in this dictionary when suffixation brings about a change of final -y to -i-, when the noun ends in a consonant plus -o or in -ey, when the noun ends in -oo, when the noun has an irregular plural or a zero plural or a foreign plural, when the noun is a compound that pluralizes any element but the last, when the noun has variant plurals, and when it is believed that the dictionary user might have reasonable doubts about the spelling of the plural or when the plural is spelled in a way contrary to expectations:

2fly *n, pl files*
 to ma-to . . . *n, pl -toes*
 val-ley . . . *n, pl valleys*
 2boo *n, pl boos*
 1mouse . . . *n, pl mice*
 sheep . . . *n, pl sheep*
 alu-mi-nus . . . *n, pl -ni*

moth-er-in-law *n. pl mothers-in-law*

¹seed *n. pl seed or seeds*

¹pi *n. pl pis*

²dry *n. pl drys*

Cutback inflected forms are used when the noun has three or more syllables:

an-i-mos-i-ty *n. pl -ties*

The plurals of nouns are usually not shown when the base word is unchanged by suffixation, when the noun is a compound whose second element is readily recognizable as a regular free form entered at its own place, or when the noun is unlikely to occur in the plural:

¹cat *n*

¹church *n*

gad fly *n*

al-che-my *n*

Nouns that are plural in form and that regularly occur in plural construction are labeled *n pl*:

en-vi-rons *n pl*

Nouns that are plural in form but that are not always construed as plurals are appropriately labeled:

ge-net-ics *n pl but sing in constr*

forty winks *n pl but sing or pl in constr*

A noun that is singular in construction takes a singular verb when it is used as a subject; a noun that is plural in construction takes a plural verb when it is used as a subject.

VERBS

The principal parts of verbs are shown in this dictionary when suffixation brings about a doubling of a final consonant or an elision of a final *-e* or a change of final *-y* to *-i-*, when final *-c* changes to *-ck* in suffixation, when the verb ends in *-ey*, when the inflection is irregular, when there are variant inflected forms, and when it is believed that the dictionary user might have reasonable doubts about the spelling of an inflected form or when the inflected form is spelled in a way contrary to expectations:

²brag *vb* bragged, brag-ging

¹blame *vt* blamed; blam-ing

¹spy *vb* spied, spy-ing

²pic-nic *vi* pic-nicked; pic-nick-ing

²volley *vb* vol-leyed; vol-ley-ing

³ring *vb* rang; rung; ring-ing

⁴bias *vt* bi-ased or bi-ased, bi-as-ing or bi-as-ing

²visa *vt* vi-saed; vi-as-ing

²chagrin *vt* cha-grined; cha-grin-ing

The principal parts of a regularly inflected verb are shown when it is desirable to indicate the pronunciation of one of the inflected forms:

²spell *vb* spelled \ˈspeld, ˈspelt\, spell-ing

²but-ton *vb* but-toned; but-ton-ing \ˈbʊt-nɪŋ, -nɪŋ\

Cutback inflected forms are often used when the verb has three or more syllables, when it is a disyllable that ends in *-l* and has variant spellings, and when it is a compound whose second element is readily recognized as an irregular verb:

de-i-fy *vt* -fied; -fy-ing

²carol *vb* -aled or -alled; -al-ing or -al-ing

with-draw *vb* -drew; -drawn; -draw-ing

The principal parts of verbs are usually not shown when the base word is unchanged by suffixation or when the verb is a compound whose second element is readily recognizable as a regular free form entered at its own place:

⁴halt *vt*

dis-sat-is-fy *vt*

ADJECTIVES & ADVERBS

The comparative and superlative forms of adjectives and adverbs are shown in this dictionary when suffixation brings about a doubling of a final consonant or an elision of a final *-e* or a change of final *-y* to *-i-*, when the word ends in *-ey*, when the inflection is irregular, and when there are variant inflected forms:

¹red *adj* red-der; red-dest

¹bare *adj* bar-er; bar-est

¹heavy *adj* heav-i-er; -est

¹early *adv* ear-li-er; -est

hom-ey also hom-y *adj* hom-i-er; -est

¹good *adj* bet-ter; best

²ill *adv* worse; worst

¹shy *adj* shi-er or shy-er; shi-est or shy-est

Adjectives and adverbs of two or more syllables are usually cut back:

come-ly *adj* come-li-er; -est

²easy *adv* eas-i-er; -est

The comparative and superlative forms of regularly inflected adjectives and adverbs are shown when it is desirable to indicate the pronunciation of the inflected forms:

¹long \ˈlɒŋ\ *adj* lon-ger \ˈlɒŋ-ɡər\; lon-gest \ˈlɒŋ-ɡɛst\

The inclusion of inflected forms in *-er* and *-est* at adjective and adverb entries means nothing more about the use of *more* and *most* with these adjectives and adverbs than that their comparative and superlative degrees may be expressed in either way: *lazier* or *more lazy*; *laziest* or *most lazy*.

At a few adjective entries only the superlative form is shown:

mere *adj* mer-est

The absence of the comparative form indicates that there is no evidence of its use.

The comparative and superlative forms of adjectives and adverbs are not shown when the base word is unchanged by suffixation or when the word is a compound whose second element is readily recognizable as a regular free form entered at its own place:

¹full *adj*

un-lucky *adj*

The comparative and superlative forms of adverbs are not shown when they are identical with the inflected forms of a preceding adjective homograph:

¹hot *adj* hot-ter; hot-ter

²hot *adv*

Inflected forms are not shown at undefined run-ons or at some entries bearing a limiting label:

Jac-o-bin *n* — Jac-o-bin-ize

²lampoon *vt* — lam-poon-ery *n*

¹net *n* — net-ty *adj*

²cote *vt* — obs: to pass by

crouse *adj* — chiefly Scot: BRISK, LIVELY

Capitalization

Most entries in this dictionary begin with a lowercase letter. A few of these have an italicized label *often cap*, which indicates that the word is as likely to be capitalized as not, that it is as acceptable with an uppercase initial as it is with one in lowercase. Some entries begin with an uppercase letter, which indicates that the word is usually capitalized. The absence of an initial capital or of an *often cap* label indicates that the word is not ordinarily capitalized:

massive . . . *adj*
 anglicize . . . *vt* *often cap*
 Swiss . . . *n*

The capitalization of entries that are open or hyphenated compounds is similarly indicated by the form of the entry or by an italicized label:

ice cream . . . *n*
 'french fry . . . *vt*, *often cap* 1st F
 neo-im pres-sion-ism . . . *n*, *often cap* N&I
 non-Com-mu-nist . . . *adj*
 Irish setter . . . *n*
 Memorial Day . . . *n*

A word that is capitalized in some senses and lowercase in others shows variations from the form of the main entry by the use of italicized labels at the appropriate senses:

Gyp-sy . . . *n* 3 *not cap*
 Sel-va-tion-ist . . . *n* 2 *often not cap*
 'mass . . . *n* 1 *cap*
 es-tab-lish-ment . . . *n* 2 *b* *often cap*

Attributive Nouns

The italicized label *often attrib* placed after the functional label *n* indicates that the noun is often used as an adjective equivalent in attributive position before another noun:

ap-ple . . . *n*, *often attrib*
 'dog . . . *n*, *often attrib*

Examples of the attributive use of these nouns are *apple pie* and *dog license*.

While any noun may occasionally be used attributively, the label *often attrib* is limited to those having broad attributive use. This label is not used when an adjective homograph (as *iron* or *paper*) is entered. And it is not used at open compounds (as *X-ray*) that may be used attributively with an inserted hyphen (as in *X-ray therapy*).

Etymology

The matter in boldface square brackets preceding the definition is the etymology. Meanings given in roman type within these brackets are not definitions of the entry, but are meanings of the Middle English, Old English, or non-English words within the brackets.

The etymology traces a vocabulary entry as far back as possible in English (as to Old English), tells from

what language and in what form it came into English, and (except in the case of such words outside the general vocabulary of English as *dacha* and *talipor*) traces the pre-English source as far back as possible. These etyma are printed in italics.

The etymology usually gives the Middle English and the Old English forms of words in the following style:

'reed . . . *n* [ME *rede*, fr OE *hrēod* . . .]
 'hate . . . *n* [ME, fr OE *hete* . . .]

An etymology in which a word is traced back to Middle English but not to Old English indicates that the word is found in Middle English but not in those texts that have survived from the Old English period:

'clog . . . *n* [ME *clogge* short thick piece of wood]
 'rub . . . *vb* [ME *rubben*; akin to Icel *rubba* to scrape]

An etymology in which a word is traced back directly to Old English with no intervening mention of Middle English indicates that the word has not survived continuously from Old English times to the present. Rather, it died out after the Old English period and has been revived in modern times.

Geat . . . *n* [OE *Gēat*]
 thegn . . . *n* [OE . . .]

The etymology gives the language from which words borrowed into English have come. It also gives the form or a transliteration of the word in that language if the form differs from that in English:

'fes-ti-val . . . *adj* [ME, fr MF, fr L *festivus* festive]
 linn . . . *n* [ScGael *linne* pool]
 'school . . . *n* [ME *scole*, fr OE *scōl*, fr L *schola* . . .]
 smør-gas-bord . . . *n* [Sw *smorgasbord* . . .]

In a few cases the expression "deriv of" replaces the more usual "fr." This expression indicates that one or more intermediate steps have been omitted in tracing the derivation of the form preceding the expression from the form following it:

galley . . . *n* [OF *galie*, deriv of MGk *galea*]

An etymology is not usually given for a word created in English by the combination of existing constituents or by functional shift. This indicates that the identity of the constituents is expected to be self-evident to the user:

like-ness . . . *n* 1: the quality or state of being like
 tone-deaf . . . *adj*: relatively insensitive to differences in musical pitch
 tooth-paste . . . *n*: a paste for cleaning the teeth
 profit system . . . *n*: FREE ENTERPRISE
 'wheel . . . *vi* 1: to turn on or as if on an axis

In the case of a family of words obviously related to a common English word but differing from it by containing various easily recognizable suffixes, an etymology is usually given only at the base word, even though some of the derivatives may have been formed in a language other than English:

'im-mor-tal . . . *adj* [ME, fr L *immortalis* . . .] 1: exempt from death
 im-mor-tal-i-ty . . . *n*: the quality or state of being immortal

The word *immortality* was actually borrowed into Middle English (via Middle French) from Latin *immortalitas*.

Sometimes a usage note is used in place of a definition. Some function words (as conjunctions and prepositions) have little or no semantic content; most interjections express feelings but are otherwise untranslatable into meaning; and some other words (as oaths and honorific titles) are more amenable to comment than to definition:

¹*if* . . . *conj* . . . 3 — used as a function word to introduce an exclamation expressing a wish

¹*for* . . . *prep* . . . 9 — used as a function word to indicate duration of time or extent of space

²*ouch* *interj* . . . — used esp. to express sudden pain

²*gad* *interj* . . . — used as a mild oath

¹*lord* . . . *n* . . . 4 — used as a British title

Sense Division

A boldface colon is used in this dictionary to introduce a definition:

debutante . . . *n* . . . : a young woman making her formal entrance into society

It is also used to separate two or more definitions of a single sense:

²*imitation* *adj*: resembling something else that is usu. genuine and of better quality: not real

Boldface Arabic numerals separate the senses of a word that has more than one sense:

²*quizz* *v* . . . 1: to make fun of: MOCK 2: to look at inquisitively 3: to question closely

Boldface lowercase letters separate the subsenses of a word:

¹*pack* . . . *n* . . . 2 **a**: the contents of a bundle **b**: a large amount or number: HEAP **c**: a full set of playing cards

Lightface numerals in parentheses indicate a further division of subsenses:

¹*retreat* . . . *n* . . . 1 **a** (1): an act or process of withdrawing (2): the process of receding **b** (1): the usu. forced withdrawal of troops (2): a signal for retreating

A lightface colon following a definition and immediately preceding two or more subsenses indicates that the subsenses are subsumed by the preceding definition:

huge . . . *adj* . . . : very large or extensive **as** **a**: of great size or area **b**: great in scale or degree **c**: great in scope or character

¹*peculiar* . . . *adj* . . . 3: different from the usual or normal **a**: SPECIAL PARTICULAR **b**: CURIOUS **c**: ECCENTRIC QUEER

The word *as* may or may not follow the lightface colon. Its presence (as at *huge*) indicates that the following subsenses are typical or significant examples. Its absence (as at *peculiar*) indicates that the subsenses which follow are exhaustive.

The system of separating the various senses of a word by numerals and letters is a lexical convenience. It reflects something of their semantic relationship, but it does not evaluate senses or set up a hierarchy of importance among them.

Sometimes a particular semantic relationship between senses is suggested by the use of one of four italic sense dividers: *esp*, *specif*, *also*, or *broadly*

The sense divider *esp* (for *especially*) is used to introduce the most common meaning subsumed in the more general preceding definition:

chick . . . *n* . . . 1 **a**: CHICKEN *esp*: one newly hatched

The sense divider *specif* (for *specifically*) is used to introduce a common but highly restricted meaning subsumed in the more general preceding definition:

²*pitcher* . . . *n*: one that pitches, *specif*: the player that pitches in a game of baseball

The sense divider *also* is used to introduce a meaning that is closely related to but may be considered less important than the preceding sense:

Mo-selle . . . *n* . . . a white table wine made in the valley of the Moselle, *also*: a similar wine made elsewhere

The sense divider *broadly* is used to introduce an extended or wider meaning of the preceding definition:

bull's-eye . . . *n* . . . 3 **b**: a shot that hits the bull's-eye, *broadly*: something that precisely attains a desired end

The order of senses is historical: the sense known to have been first used in English is entered first. This is not to be taken to mean, however, that each sense of a multisense word developed from the immediately preceding sense. It is altogether possible that sense 1 of a word has given rise to sense 2 and sense 2 to sense 3, but frequently sense 2 and sense 3 may have arisen independently of one another from sense 1.

Information coming between the entry word and the first definition of a multisense word applies to all senses and subsenses. Information applicable only to some senses or subsenses is given between the appropriate boldface numeral or letter and the symbolic colon:

ole-in . . . *n* . . . 2 *also* *ole-lne* \-ən, -ēn\

cru-ci-fix-ion . . . *n* . . . 1 **a** . . . **b** *cap*

tile . . . *n* . . . 1 *pl* *tiles* or *tile* **a**: . . .

²*palm* . . . *n* . . . 3 [*L. palmus*, fr *palma*]

When an italicized label or guide phrase follows a boldface numeral, the label or phrase applies only to that specific numbered sense and its subsenses. It does not apply to any other boldface numbered senses:

ro-ta . . . *n* . . . 1 *chiefly Brit* . . . 2 *cap*

ro-man-ti-cism . . . *n* . . . 1: . . . 2 *often cap* **a** (1): (2)

At *rota*, the *chiefly Brit* label applies to sense 1 but not to sense 2. The *cap* label applies to sense 2 but not to sense 1.

At *romanticism*, the *often cap* label applies to all the subsenses of sense 2 but not to sense 1.

When an italicized label or guide phrase follows a boldface letter, the label or phrase applies only to that specific lettered sense and its subsenses. It does not apply to any other boldface lettered senses:

¹*hearse* . . . *n* . . . 2 **a** *archaic*: . . . **b** *obs*

The *archaic* label applies to sense 2a but not to sense 2b. The *obs* label applies to sense 2b but not to sense 2a.

When an italicized label or guide phrase follows a parenthesized numeral, the label or phrase applies only to that specific numbered sense.

mat-ter . . . *n* . . . 1 **h** (1) *obs*: REASON CAUSE

The *obs* label applies to sense 1h (1) and to no other subsenses of the word.

Names of Plants & Animals

An entry that defines the name of a plant or animal (as peach or lion) is a taxonomic entry. Such entries employ in part a formal codified vocabulary of New Latin names—*taxa*—that has been developed and used by biologists in accordance with international codes of botanical and of zoological nomenclature for the purpose of identifying and indicating the relationships of plants and animals. Names of *taxa* higher than the genus (as class, order, and family) are capitalized plural nouns which are often used with singular verbs and which are not abbreviated in normal use.

The genus is the fundamental taxon. It names a group of closely related kinds of plants (as *Prunus*, which includes the wild and cultivated cherries, apricots, peaches, and almonds) or animals (as *Felis*, which includes domestic and wild cats, lions, tigers, and cougars). It is a capitalized singular noun.

Each organism has one—and only one—correct name under these codes. The name for a species—the *binomial* or *species name*—consists of a singular capitalized genus name combined with an uncapitalized specific epithet. The name for a variety or subspecies—the *trinomial*, variety name, or subspecies name—adds a similar varietal or subspecific epithet. Thus the cultivated cabbage (*Brassica oleracea capitata*), the cauliflower (*Brassica oleracea botrytis*), and the brussels sprout (*Brassica oleracea gemmifera*) belong to the same species (*Brassica oleracea*) of cole.

Taxa in this dictionary are enclosed in parentheses and usually come immediately after the primary orienting noun. Genus names as well as binomials and trinomials are italicized, but names of taxa above the genus are not italicized:

basidio-my-cete *n* : any of a large class (Basidiomycetes) of higher fungi having septate hyphae, bearing spores on a basidium, and including rusts, smuts, mushrooms, and puffballs

rob-in *n* 1 *a* : a small European thrush (*Erithacus rubecula*) resembling a warbler and having a brownish olive back and yellowish red throat and breast 2 *b* : any of various Old World songbirds that are related to or resemble the European robin 2 : a large No. American thrush (*Turdus migratorius*) with oliveaceous gray upperparts, blackish head and tail, black and whitish streaked throat, and chiefly dull reddish breast and underparts

Taxa are used in this dictionary to provide precise technical identifications through which defined terms may be pursued in technical writing. Because of their specialized nature, however, taxa do not have separate entries.

Taxonomic entries are usually oriented indirectly to higher taxa by other vernaculars (as by *alga* at seaweed or *thrush* at robin) or by technical adjectives (as by *composite* at daisy, *leguminous* at pea, or *teleost* at perch). Among the higher plants, except the composites and legumes and a few obscure tropical groups, such orientation is by a vernacular family name that is linked at the corresponding taxonomic entry to its technical equivalent:

beech *n* : any of a genus (*Fagus* of the family Fagaceae, the beech family) of hardwood trees with smooth gray bark and small edible nuts, also : its wood

oak *n* 1 *a* : a tree or shrub (genera *Quercus* or *Lithocarpus*) of the beech family that produces a rounded one-seeded thin-shelled nut surrounded at the base by an indurated cup

A genus name may be abbreviated to its initial letter when it is used more than once in senses not separated by a boldface number:

nas-tur-tium *n* : any of a genus (*Tropaeolum* of the family Tropaeolaceae, the nasturtium family) of herbs with showy spurred flowers and pungent seeds, esp. : either of two widely cultivated ornamentals (*T. majus* and *T. minus*)

Cross-Reference

Four different kinds of cross-references are used in this dictionary: directional, synonymous, cognate, and inflectional. In each instance the cross-reference is readily recognized by the lightface small capitals in which it is printed.

A cross-reference following a lightface dash and beginning with *see* or *compare* is a directional cross-reference. It directs the dictionary user to look elsewhere for further information. A *compare* cross-reference is regularly appended to a definition; a *see* cross-reference may stand alone:

plea *n* ... 2 .. *a* ... — *compare* DEMURRER

scruple ... *n* ... 1 — *see* WEIGHT table

A cross-reference immediately following a boldface colon is a synonymous cross-reference. It may stand alone as the only definitional matter for an entry or for a sense or subsense of an entry; it may follow an analytical definition; it may be one of two synonymous cross-references separated by a comma:

multisyllabic *adj* : POLYSYLLABIC

drainage *n* ... 2 : *a* device for draining : DRAIN

drippy *adj* ... 1 : RAINY, DRIZZLY

A synonymous cross-reference indicates that a definition at the entry cross-referred to can be substituted as a definition for the entry or the sense or subsense in which the cross-reference appears.

A cross-reference following an italic *var of* is a cognate cross-reference:

fjord var of FJORD

Sometimes a cognate cross-reference has a limiting label preceding *var of* as a specific indication that the variant is not standard English:

mair *chiefly Scot var of* MORE

quare *dial var of* QUEER

sher-rie *archaic var of* SHERRY

A cross-reference following an italic label that identifies an entry as an inflected form of a noun, of an adjective or adverb, or of a verb is an inflectional cross-reference. Inflectional cross-references appear only when the inflected form falls at least a column away from the entry cross-referred to:

mice pl of MOUSE

sang past of SING

Synonyms & Antonyms

Synonymous words believed to be of interest to the dictionary user are listed in groups following the entry of one of the words in the group. (See, for example, *talkative* on page 1180.) They are signaled by an indented boldface italic *syn*. They are followed by a brief statement of their common denotation which is called the "shared meaning element" and by a list of antonyms which is identified by a prefixed boldface italic *ant* and is specific to the first member of the group.

Synonymous words believed to present special problems to the dictionary user are similarly listed and are, further, clearly discriminated and illustrated in an accompanying paragraph. (See, for example, *gaudy* on page 471.)

When a word is included in a synonym list, the main entry of that word is followed by a run-on *syn* see—which refers to the entry where the synonym list may be found. Where appropriate, the run-on is followed by *ant* and any antonyms specific to the word. (See, for example, *facetious* on page 406.)

Combining Forms, Prefixes & Suffixes

An entry that begins or ends with a hyphen is a word element that forms part of an English compound:

self- *comb form*

-ology . *n comb form* . <phraseology>

-lyze . *vb comb form* . <electrolyze>

pre- *prefix* . <prehistoric>

-er . *adj suffix or adv suffix* . <hotter> <drier>

-ism . *n suffix* . <barbarianism>

-fy . *vb suffix* . <atify>

Combining forms, prefixes, and suffixes are entered in this dictionary for three reasons: to make easier the writing of etymologies of words in which these word elements occur over and over again; to make understandable the meaning of many undefined run-ons which for reasons of space would be omitted if they had to be given etymologies and definitions; and to

make recognizable the meaningful elements of new words that are not well enough established in the language to warrant dictionary entry.

Lists of Undefined Words

Lists of undefined words occur after the entries of the prefixes *non-*, *re-*, and *un-*. These words are not defined because they are self-explanatory: their meanings are simply the sum of a meaning of the prefix combined with a meaning of the root word.

Abbreviations & Symbols

Abbreviations and symbols for chemical elements are included as main entries in the vocabulary:

ecet *abbr*

Au *symbol*

Abbreviations have been normalized to one form. In practice, however, there is considerable variation in the use of periods and in capitalization (as *mph*, *m.p.h.*, *Mph*, and *MPH*), and stylings other than those given in this dictionary are often acceptable.

Abbreviations regularly used in this dictionary are listed separately on page 31a.

Symbols that are not capable of being alphabetized are included in a separate section of the back matter headed "Signs and Symbols."

The English Language and Its History

W. Nelson Francis

Professor of Linguistics and English
Brown University

English is undoubtedly the most important of the world's languages at the present time. In number of speakers it ranks second,¹ with approximately 275 million native speakers, compared with 610 million native speakers of Mandarin Chinese. Spanish comes next, with 210 million, followed by Russian with 140 million and Hindi-Urdu and Arabic with 130 million each. Importance is not measured only by numbers, however. The uses to which a language is put and the extent of its international exposure are at least as important as the sheer bulk of native speakers. The worldwide use of English in diplomacy, commerce, and science is evidence of its importance in this regard, and serves to explain why many millions around the world find it desirable and sometimes necessary to learn it as a second language.

It is not the intrinsic superiority of English over other languages that has made it the premier world language. If it is richer in vocabulary, more flexible in grammar, and more expressive than other languages (and some would question at least the last two of these claims), these qualities are the results, not the causes, of its importance in the world. Simply stated, what makes a language important is the importance of the people who use it and the uses to which they put it. Since the eighteenth century, speakers of English—at first from the British Isles and later from America and the dominions—have played a dominant role in colonial expansion, industrial and technological development, and world politics. The position of English in the world is the direct result of the history of those who speak it.

What is modern English, this great world language, like? Before we can answer that question at all meaningfully, we must deal with the broader questions: What is a language like? and What qualities, if any, are shared by all languages, regardless of their relative prominence or obscurity? These are questions which are central to the study called linguistics. They cannot be completely answered by linguistics in its present state; probably they will never be completely answered. But linguistics has progressed sufficiently so that partial answers, dealing with the larger aspects of the questions, can be tentatively suggested. Like the answers put forward by most sciences, these are subject to revision in the future as new insights and new techniques are brought to bear and new minds take up the old problems from new angles. All we can say is that this is what we know, or think we know, now.

In the first place, language is a uniquely human possession, at least in that little corner of the universe that we know about. All races, tribes, and families of men have language; no animals do. Some people might question the second of these statements,

since we know that animals communicate with one another by sounds. But when we identify the particular qualities of genuine language, we discover that animal communication systems are different in several fundamental ways. Why this is so, when we share so much of our anatomy, physiology, and psychology with the animals, especially the apes and monkeys, science cannot yet clearly explain. It seems to be largely due to the structure of our brains, though other physical differences, especially in the anatomy of the throat and mouth, may have something to do with it. Much research is going on now in the attempt to answer this question. Meanwhile it is certainly a deeply ingrained part of our human nature to consider language as belonging to man alone. There is something a bit eerie about those animals, mostly birds, which can be taught to mimic the sounds of language. All the stories, whether fables, fairy tales, or fantasies, that endow animals with speech also give them other human qualities as well, so that they cease to be animals and become humans in disguise. On the other hand, we find it hard to imagine a human society lacking language. None has ever been found. If there still are tribes unknown to us living in isolation in Amazonian jungles, we are confident that they have language.

It is paradoxical that in spite of this universality of language among humans it still must be learned afresh by each individual person. There is considerable debate among linguists and psychologists as to how much of our linguistic ability we inherit and how much we have to learn from others. A conservative position would be that we inherit a remarkable aptitude for learning language, or at least one language, together with a very strong motivation to learn it early in life. Some linguists go much farther, as far as to maintain that we inherit not only an aptitude and a desire to learn, but actually a good part of the underlying system that is much the same in all languages. In any case, three conditions meet together to allow us to learn a language rapidly and successfully while we are still very young children: aptitude, strong motivation, and exposure to older people actually using language as they go about their lives. All normal children seem to have the first two of these; the third supplies the input which decides what particular language, or sometimes languages, we learn. It is thus a factor of our heredity that we are able and eager to learn a language, and an accident of our environment that the language we learn is English or French or some other of the three thousand or so living languages. The normal circumstance is to learn the language surrounding us in early childhood and to speak it the rest of our lives; it is our NATIVE SPEECH or MOTHER TONGUE. Occasionally the environment is such that the child learns two mother tongues at the same time and is thus a native bilingual. Even more rarely, the child

¹ According to figures compiled by the Center for Applied Linguistics, Arlington, Va., in 1976.

may begin with one native speech but switch to another at such an early age that he forgets the first one completely. Whatever the situation, it is wholly a result of the environment. Most people are monolingual native speakers simply because most families and communities are homogeneously monolingual.

The fact that every normal human learns whatever language he happens to be surrounded by in childhood and that the amount of time and effort expended in this learning seems to be about the same for all languages suggests that languages must be essentially similar in their general form, however different they may be in details. Linguistics supports this supposition. It is possible to list a large number of qualities as being characteristic of language in general and hence of all known languages. Linguists call these LANGUAGE UNIVERSALS.

In the first place, languages are very versatile and adaptable. Their versatility is shown by the fact that all kinds of people, from scholars and mystics to laborers and mechanics, can make use of the same language to carry on their work, their social life, their thoughts, and their recreations. There are differences between the ways in which these different groups use their language, but it is at bottom the same means of communication. Another sign of the versatility of language is the fact that speakers are constantly saying new things that they never heard before, and others understand their utterances with equal ease, often without even realizing that they are new. This is one of the great differences between language proper and the pseudolanguages used by animals. So far as we know, all animal communications consist of a relatively short list of utterances which cannot be changed, expanded, or used in new and different ways. An animal "language", then, is rather like one of those little pocket phrase books for travelers. Even if he memorizes the book, the traveler is restricted to the immediate practical needs covered by the repertory of messages in the book. He can ask the way to his hotel or the price of a souvenir, but he can't comment very effectively on the sunset or describe the way things are in his hometown. And if something he says moves a speaker of the language to engage in real conversation, the traveler is lost. But two speakers of the same language, even though they may be very different in background, experience, education, and personality, can find a way to talk about anything they want to, using sentences that were never printed in any phrase book because nobody ever used them before.

The adaptability of language is related to its versatility. Like other human institutions, a language is adjusted by long use to the particular needs of the people and the society that use it. When these needs change, the language also changes, usually much more rapidly than most other institutions. This is why it is that in 1500 years—a relatively short space of time in human history—English has changed from the language of a rough, warlike, rather savage, agrarian, tribal society like that of the Anglo-Saxons to the typical language of the most complicated technological civilization yet developed on earth. It has always been easily adjusted to meet the new needs put upon it by a new religion, a new social system, an age of worldwide exploration, conquest, and colonization; and a series of political, agricultural, industrial, scientific, technological, and electronic revolutions. Other languages have done the same, and the process is going on today as the peoples of many different cultures around the world cope with the problem of adapting to Western society. Here again language shows itself fundamentally different from the communication systems of animals. A group of animals, transplanted from their natural habitat to a new and different one do not devise new cries to deal with the new circumstances. They have

only their little phrase book of specific and unalterable utterances, many of which are irrelevant to their new condition.

The versatility and adaptability that characterize all languages, as well as the fact that they all can be learned readily by any people, come from their organization or structure. Basically a language consists of four main parts or systems, each of which has its own organization while also being related to the others. First, and certainly most obvious in a dictionary like this one, is the VOCABULARY, or LEXICON, a relatively large collection of words and word parts. Then there is the GRAMMAR, a set of rules governing the ways in which items from the lexicon can be combined into larger units. These words and sentences are related to the vast variety of things, events, and ideas that we talk about by a system of meanings, a SEMANTIC SYSTEM. Finally a tightly organized system of sound patterns, which linguists call the PHONOLOGY, controls the way in which the strings of words put in order according to the grammar are translated into sounds that can be spoken and heard. All languages have these four parts. Many languages, including English, have a fifth part, a WRITING SYSTEM, which supplies an alternative, visual way in which the ordered strings of words can be expressed. Unlike the other four systems, which seem to be as old as language itself, writing is a relatively new invention, probably not more than 6000 years old. Usually it is a kind of visual imitation of the phonology, using about the same number of units and following the same patterns of arrangement, though some writing systems—notably the Chinese—are based directly on the words themselves, rather than on the way they sound.

The vocabulary is the most loosely organized of the systems of language, and hence the one most open to change. It is relatively easy to add a new word to it. There are three requirements: first a need, second an inventive person, and third a group of speakers to pick up the new word and use it. The need may be of various kinds, the most obvious of which is some new element in the culture that must be named. Thus when lysergic acid diethylamide, which had been known to chemists under that ponderous name for some time, began to be used widely as a hallucinogenic drug, its name became shortened to LSD. There was also a need for a word to describe the people who use it. They could have been called *lysergic acid diethylamide users* or *LSD addicts*, but the inventiveness of some anonymous word coiner came up with *acidhead*, neatly combining a quality of the substance itself with the part of the body affected. Since the group that took up this term consisted chiefly of the drug users themselves and their associates on the fringes of society, the new word was at first considered slang, but it has now been used so widely that it has become an item in the regular vocabulary of English. Its future, like that of most slang words as well as many words in the more respectable part of the vocabulary, is in doubt, for social, not linguistic, reasons. If the use of LSD turns out to be a passing fad, the term will die out with the practice, and a future generation will find it as quaint as the present one finds outmoded expressions of the twenties, like *lounge lizard* and *flapper*.

The need may be of other kinds as well. Sometimes words acquire associations with unpleasant, anti-social, or otherwise undesirable ideas or experiences, so that people become reluctant to use them. There is then a need for a substitute that people find innocuous enough to use in ordinary conversation. Men who work on the land were once called *villains* in English (ultimately from the Latin word *villa* 'farm'); now they are called *farm labourers* or even *agricultural labourers* in England and *farmhands* in

the United States. Sometimes the need is for more controllable precision, as in technical and scientific language. Thus linguists coined the word *phoneme* when the older *speech-sound* turned out to be too general and vague. Or the need may be for vocabulary items that identify the speaker with a particular social group. The special vocabularies of sailors, surfers, skiers, airplane pilots, and hundreds of other groups are full of terms which in a way serve the need for precision, but also serve to show that the speaker is "in" and to mystify and exclude those who are "out". Often these terms have perfectly good synonyms in the regular vocabulary. This is an old social use of language. Shakespeare makes amusing use of it when he shows that Prince Hal got along so well with the tavern *drawers* (waiters) that they taught him their "in" language. As the Prince puts it:

They call drinking deep, dying scarlet; and when you breathe in your watering, they cry 'hem!' and bid you play it off. To conclude, I am so good a proficient in one quarter of an hour that I can drink with any tinker in his own language during my life. [1 Henry IV, II iv]

The sources of new vocabulary items are many and varied and may change in popularity from one period to another or from one language to another. Very commonly the new words are not new at all in form, but are simply new uses of established words, such as the modern *acid* for *LSD* or Prince Hal's *dying scarlet* for drinking deep. Commonly also new combinations of old words or word parts are put together into what linguists call COMPOUNDS. The term *acidhead* is an example using whole words. The newly popular *astronaut* uses two word parts, originally from Greek, which are already familiar through their appearance in words like *astronomy* and *nautical*. Once a new word is established, a whole family of new words can be made out of it by the process of DERIVATION, the adding on of prefixes and suffixes primarily to change the grammatical function of the word. Thus as soon as English had *psychiatry* (ultimately from Greek elements meaning 'soul' and 'doctor'), the related *psychiatrist* and *psychiatric* were easily added. In English, as in many languages which at some time in their history have been in contact with one or more other languages, it is common to get new words by BORROWING. This is the process which accounts for the fact that a large majority of the words in the English lexicon are ultimately Latin or French. These four—transferred meaning, compounding, derivation, and borrowing—are the major ways in which a language gets new words. There are several minor ways as well, among which may be mentioned CLIPPING (as in *mini* from *miniskirt*, itself a compound), BLENDS (as in *brunch* from *breakfast plus lunch*), IMITATIONS (as in the verb *whiz*), ACRONYMS (as in *NASA* from *National Aeronautics and Space Administration*), ABBREVIATIONS (as in *emcee* and *deejay* for *master of ceremonies* and *disc jockey*), and COINAGES (*boondoggle*, *quark*). The last are the rarest of all, at least in English. We seem to resist the idea of making up a word completely afresh, without any reference to words already in existence.

Just as new words keep coming into the language, so old ones keep going out of use and eventually out of memory. The usual reason is that the things they refer to are no longer talked about; the generation born since World War II does not know words like *stuka* and *panzer*, which refer to modes of warfare that are no longer employed. Sometimes, however, an old word will be replaced by a new one for no apparent reason, as in the case of *eme*, the Old English word replaced by its French synonym *uncle*. These processes are natural ones, too, common to all languages. As the great lexicographer Samuel Johnson said, in answer to Swift's wish that words should

be prevented from becoming obsolete, "But what makes a word obsolete, more than general agreement to forbear it? and how shall it be continued, when it conveys an offensive idea, or recalled again into the mouths of mankind, when it has once by disuse become unfamiliar, and by unfamiliarity unpleasant." [from Preface to *A Dictionary of the English Language*, 1755]

The other part of the central core of a language is its grammar. The largest and most complicated vocabulary would be of little value without a grammar to control the ways in which words can be put together to make larger constructions. Without a grammar the lexicon is only a list of separate items, like the entries in this dictionary. Many of these words can be used alone to make brief messages, but mostly they depend on being combined with other words to make utterances worth saying or listening to. Nor is it enough simply to put words alongside each other, in the fashion of the classic "Me Tarzan you Jane." Any sentence in this essay, any definition in this dictionary, will illustrate how complex and how delicate are the conventions governing combinations of words. They are not just strung along like beads in a necklace; they are fitted together into interlocking arrangements as intricate as the works of a watch. A change in the relationships of the parts usually changes the whole utterance: consider the difference between *Rats are our enemies* and *Our enemies are rats*. The words are the same but the messages are different.

There are various ways we can look at the grammar of a language. One analogy might be the rules of such a game as chess. The basic rules of chess are quite simple. There are only six kinds of pieces, each of which has the privilege of moving in a particular way. When certain combinations occur, certain moves are obligatory. Otherwise the player has many options each time it is his turn to move. As they move in turn, the two players construct a series of patterns on the board which is not like any series either of them has seen before. In the same way the words of a language are classified as belonging to certain classes, traditionally called PARTS OF SPEECH. The functions of these are different, just as the moves of the chess pieces are. Nouns can be subjects and objects, adjectives are modifiers, pronouns substitute for nouns, and so on. The rules are more complicated than those of chess, but not so complicated that they cannot be learned by a five-year-old child. Just as the chess players create a new game, unlike any other, played in the past, so the speaker is constantly making up new sentences, many—perhaps most—of which are unlike any he ever heard or spoke in the past. The secret is in the fact that the grammar rules may be applied in many different combinations, some of them over and over, as sentences are created. Here is the major difference between animal communication and human language. Animal communication, again like the traveler's phrase book, has little or no grammar. Neither the animal nor the traveler has the power to use rules in new combinations to make original utterances. When we consider this fact, we realize that grammar is one of the greatest of all human inventions.

Another way of looking at grammar is to consider it as a set of patterns of behavior which the person using the language has somehow built into his mental structure. These patterns are sometimes called rules, but they are rules in a different sense from the rules of a game. These latter are imposed from the outside and consciously learned. But the rules of grammar, particularly those of the native language, are, as it were, invented by the child as he learns the language; they are largely unconscious, self-invented, and self-imposed. Only if he should happen

to study formal grammar much later in life will the speaker encounter explicit formulations of these rules, and even then he may not recognize them. It seems rather paradoxical that many people find the study of grammar difficult, when all it is is an attempt to formulate what they themselves invented when they were children!

When grammar is looked at in this way, it is easy to see why it is much less subject to change than is vocabulary. The grammar rules are a closely integrated system, so that if a change is made in one part it may affect many other parts of the system. The vocabulary, on the other hand, is like the population of a city, where individuals may be born and die, or move in from outside, with only minor effects on the whole organization. As we shall see when we retrace the history of English, there have been a good many changes in the grammar of English, but they have occurred very slowly and gradually over a long period of time. In many of its aspects English grammar is still much like that of German, although the two languages, once the same, diverged and went their separate ways two thousand years ago.

The third major system of language is the sound system, or phonology. It is important because it controls the principal channel through which we send messages back and forth to each other. No matter how large a person's vocabulary and how carefully constructed his sentences, he would not be able to communicate normally if he did not know how to turn them into the modulated flow of sound we call speech. Underlying this continuous flow is a tightly organized system, which depends on our ability to make and to recognize sounds that contrast with one another. Thus for the middle part of *pit* we make a sound which is clearly different from the middle sounds of *pat* and *pot*. Similarly we contrast the first part of *pit* with the first part of *bit* or *nit*, and the last part with the last part of *pick*. There doesn't happen to be an English word *pid*, but if there were we would never confuse it with *pit* or *bid* or *pod*. There are normally only 25 to 50 of these contrasting sound units in a language (30 to 40 in English, depending on the dialect), but they are enough to permit us to give each word its characteristic shape. There are, of course, many cases of HOMOPHONES (words that sound alike) like *doe* and *dough*, but we are seldom confused by these because they usually appear in different contexts.

In addition to these contrasting units, which linguists call PHONEMES, each language has quite rigorous rules about how they may be combined in syllables and words. They cannot be strung along in any and all possible combinations. In a language like Hawaiian, for example, each syllable must be either just a vowel or a single consonant followed by a vowel. The few Hawaiian words and names we all know illustrate this rule: *hula*, *alo**ha*, *Hono**lulu*, *Waiki**ki*. In contrast, English syllables have only one vowel or diphthong but may have as many as three consonants before it and three after, as in *spl**ints*. But the rules governing which consonants may be used are quite strict. For example, if there are three at the beginning of a word, the first must be *s*, the second *p*, *t*, or *k*, and the third *r*, *l*, *w*, or *y* (remember we are talking about sounds, not spellings). If you will look in the *s*-section of this dictionary, you will find how closely this rule is followed; the only words that break this rule are recent borrowings from other languages, and even these are usually changed to fit the English pattern.

A third part of the sound system concerns not the individual sounds but the features of rhythm, accent, and even musical pitch which are part of the flow of speech. Since most of these are related

to whole clauses and sentences, rather than individual words, they are not given much attention in a dictionary, which deals primarily with single words. But an important exception is STRESS, which in English is a feature of individual words. The rules for assigning stress to the correct syllables of an English word are quite rigorous, and the native speaker of English knows them as he knows the rules of grammar. But there are some doubtful cases, such as *contemplative*, *hospitable*, and *altimeter*, for which we turn to the dictionary.

Because of its tight structure, the phonological system of a language does not usually change very much or very fast. Such changes as do occur usually affect the minor details of pronunciation, rather than the underlying system of contrasts. But this may change also, by the addition or disappearance of phonemes, by changes in the combining rules, or in the rules of stress. Thus Chaucer's English of six hundred years ago had a frictional sound made in the back of the mouth, as in modern German *Nacht*, and the ancestor of our word *courage* had three syllables with the stress on the second \kù-'rà-jə\.

As has been already noted, writing systems are comparatively recent innovations, as compared to the venerable antiquity of language itself with its basic systems of vocabulary, grammar, and phonology. The human race got along for several hundred thousand years with only the channel of speech through which to communicate verbal messages. But when societies became so complex that their essential records could no longer be kept in the memories of men and when they found it necessary to transmit at a distance messages that could not be entrusted safely to the memory of a messenger, various modes of writing were invented. The earliest of these seem to have been based on the word as a unit, and made use of a separate symbol or CHARACTER, originally a conventionalized picture, for each word. The Chinese system is still based on this principle, with some modifications. Systems of this sort have certain advantages, the chief of which is that they are largely independent of pronunciation. In fact, the Chinese system is used by a number of different languages, so that people who cannot understand one another's speech can communicate by writing. But the disadvantage of having to invent and learn to read and draw thousands of characters to represent the vocabulary of a language led people to devise new types of writing systems, based on the phonological structure, which, as we have seen, has many fewer units than the vocabulary and was already in full development as a channel of communication. At first the syllable was used as the unit to be represented. Symbols representing syllables could be strung along in the same order as the syllables of speech, usually with some additional indication as to where the boundaries between words fell. Finally the phoneme became the unit to be represented, and the ALPHABET was born. Most present-day writing systems are alphabetic, though because of accidents of history they have departed more or less from the principle of consistently representing each phoneme by a single character. Alphabets are rather readily adaptable to other languages besides those for which they were originally developed. Thus our Roman alphabet, originally devised for Latin, has been adopted by most of the languages of western Europe and the New World. Other familiar alphabets are the Cyrillic, used for Russian and other Slavic languages; the Arabic, used also for Persian and Urdu and formerly for Turkish; the Hebrew, also used for Yiddish; the Devanagari of India; and the Greek.

Alphabetic writing systems resemble phonological systems in that they have a relatively small number

of units and a set of rules, sometimes quite elaborate, governing the ways in which the units may and may not be combined. Some of these rules are, as might be expected, simply reflections of the rules of the phonology. But others belong to the writing systems themselves. In English, for example, though we have many words ending in the sounds of *v* and *j*, there is a strong rule, with very few exceptions, against ending a word with either of these letters. Instead we write *-ge* or *-dge* for a final *j*-sound and *-ve* for a final *v*-sound. There is also a rule against doubling these letters, and *k* as well, even for the usual purpose of indicating that the preceding vowel is short. So we write *liver*, *flicker*, and *badger*, instead of the more consistent *livver*, *flicker*, *badger*.² It is these rules, which are known unconsciously by all literate users of English, that give English its characteristic look on the page. Combinations like *zdenek*, *llijj*, and *mbau* simply don't look English, while *flacc*, *crasp*, and *splick* could very well represent English words, though they don't happen to. In short, our system, for all its inconsistencies, is indeed a system and one which most people can learn to use easily and accurately. But it is also true that checking on spelling is one of the most common reasons for using the dictionary.

The semantic system has been left to the last partly because we know least about it in a formal way. It is probably not obvious to the ordinary observer that there is such a system. Everyone knows that meaning is an important part of language, but somehow they feel that words and sentences represent meaning directly, without the intervention of another formal system. But a little thought about how language works, and especially some comparisons of how different languages convey similar facts and ideas, leads us to the conclusion that there is a quite elaborate formally structured system between the infinite variety of the outside world and our ways of talking about it. Take the question of measurements. English, like the other languages in the western European tradition, has an elaborate system of ways of describing the size of things in terms of abstract standard units that can be counted, added, subtracted, multiplied, and divided. If asked how big a book or a desk is, we think of applying a ruler to it and giving the answer in inches or feet and fractions of these units. The whole repertory of miles, pounds, pints, cubic feet, acres, and all the rest is based on this underlying assumption that numerically manipulable standard units are the way to measure things. We are so committed to this way of measuring that we can hardly imagine any other. But many cultures, and the languages associated with them, measure distance in terms of time; two localities may be "two days' journey" apart. According to our system, one

20-mile stretch across country is equal to another, though the first may be across a level plain and the other across rough broken country or through a jungle. Another system might find these two not equal at all; the first might be "half a day's walk" and the second "two days' walk."³

Another illustration of the formal structuring of meanings, also taken from the general area of measurements, is the description of dimensions. In English we do this with pairs of words signifying opposite poles of measurement along a certain line, such as *tall* : *short* and *far* : *near*. Furthermore we have two sets of these, one set in which the line of measurement is related to a fixed point, often but not always that of the observer or speaker, and another set in which the line of measurement is related rather to the shape of the object being measured. Thus the first set has three main pairs: *far* and *near* (measured along a line extending from the observer in a specified direction), *high* and *low* (measured along a vertical line perpendicular to the observer's line of sight), *wide* and *narrow* (measured along a horizontal line perpendicular to the observer's line of sight). The second set has more dimensions—at least five—but they are still signified by pairs of opposed words: *large* (*big*) and *small* (*little*), *long* and *short*, *tall* and *short*, *deep* and *shallow*, *wide* (*broad*) and *narrow*, *thick* and *thin*. A further interesting point about English is that in each of these pairs one, which is somehow the larger one, is chosen for giving a neutral measurement or asking a neutral question about one of the dimensions. We say "The door is three feet *wide*," "The water is three feet *deep*," or "How *tall* is John?" rather than "The door is three feet *narrow*," "The water is three feet *shallow*," or "How *short* is John?" We would say the latter if someone else had already said "John is quite short," and even then the answer would be "He is only five feet *tall*." Similarly we choose the larger dimension for the neutral nouns describing these dimensions: the *length* of the journey, the *height* of the building, the *depth* of the water. There are also nouns for the small dimensions, but they are all what linguists would call SEMANTICALLY MARKED. Note that "the *shortness* of the journey," "the *lowness* of the building," "the *shallowness* of the water" all convey special meanings beyond a mere neutral indication of dimension. It is clear that systems like these are not merely parts of the natural world; they impose a structural framework on the natural world which makes it easier to talk about it. This is what we mean by speaking of a semantic system that is part of language.

The relationships among these various systems are quite complex, but they may be suggested in a diagram such as this:

² A few violations of this rule are beginning to appear, usually in slang, dialectal, and humorous words like *flivver* and *yakking*.

³ One unit of distance in terms of time that we do use is the *light-year*. But since the speed of light is constant, this is still an abstract standard: it is simply easier to say "one light-year" than "5,878,000,000,000 miles."

Here we see language, which is inside the minds of people, in contact with the outside world in two places, which scientists might call *interfaces*. At one end the semantic system sorts out, classifies, and arranges the jumble of events, objects, and relationships fed in by the outside world. At the other, the phonology and the writing system give instructions which control the actual performance of the speaker or writer. Within language itself, the internal structures of the various parts, as well as the relationships among them, are very complicated. It is the function of the dictionary to give

information about many of these. Thus the main entries, in giving the correct spelling, indicate the relationship between the vocabulary and the writing system. Pronunciation cues indicate the relationship between vocabulary and phonology; definitions, that between vocabulary and the semantic system and sometimes between the semantic system and the real world. Each word is also classified under one or more parts of speech, which suggests the relationship between vocabulary and grammar. Thus the dictionary, centering on the vocabulary, also involves all the other parts of language.

The History of English

Language, like all other aspects of human culture, is constantly changing. This is implied in a good deal that is said above. Certainly the adaptability of language is one of the major sources of change; as the circumstances and needs of the speakers of a language change, they change the language to meet them. This is particularly apparent in vocabulary, where change is easiest to observe, and most rapid. There are many words in this dictionary which were not included in Webster's Third New International Dictionary, published only twelve years ago. Less obviously, there are words now considered obsolete that were in current use not many decades ago. It is, of course, harder to decide that a word has left the vocabulary than that one has joined it, because the old words are enshrined in the older books even though people may not use them in speech. Hence the vocabulary, and the dictionary that reports it, has a category of *ARCHAIC* words—museum specimens, no longer completely alive, but still needed in special ways.

Change goes on in other parts of the language as well, though it is harder to observe. Anyone who has lived a *moderately long life* is not using exactly the same grammar and pronunciation that he learned as a child, though he himself is usually unaware of the changes that have taken place. These changes usually happen so slowly and gradually that they are imperceptible to the people in whose language they occur. It is only when we look back over a period of a century or more that language begins to look a little old-fashioned. Until recently it has not been possible to compare a person's pronunciation at various ages, as well as to observe what changes take place across the generations. Modern means of voice recording will make this possible in the future.

In order to see how the old-fashioned quality of language ultimately changes to complete unintelligibility if we go far enough back in time, let us take a retrospective trip into the older stages of English, making stops every two hundred years or so. The passages which will be used for illustration are all quite formal documents—in all cases but one they are public notices or proclamations—so that their kind of language is the kind that changes most slowly. Slang, informal conversation, personal letters, are all more unstable and changeable than the formal language of laws, legal documents, public announcements, and royal proclamations, which tends to retain archaic vocabulary and to some extent grammar as well. Yet we shall see that when we go back as far as five and a half centuries, even

this conservative formal language becomes quite strange.

Our first example is from a document which is—or at least ought to be—familiar to all Americans: the Declaration of Independence, 1776.

Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shewn, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object, evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security.—Such has been the patient sufferance of these Colonies; and such is now the necessity which constrains them to alter their former Systems of Government. The history of the present King of Great Britain is a history of repeated injuries and usurpations, all having in direct object the establishment of an absolute Tyranny over these States.

Probably what strikes the twentieth-century reader of this passage first is its extreme formality. It may even take a bit of study to realize that "the forms to which they are accustomed" means what we would more informally express as "the type of government they are used to," and we would feel easier with "the need that forces them to change the government" than we do with "the necessity which constrains them to alter their former Systems of Government." The more formal passages are still quite possible in modern English, however. It is rather a matter of style than age which makes them seem a bit out-of-date to us. The same may be said of the fact that the subjects of a good many of the sentences are abstract qualities: "Prudence . . . will dictate," "experience hath shewn," "necessity . . . constrains"—it is as though the actors in the drama were these abstractions, rather than people. But this is a characteristic feature of eighteenth-century style, which helps to emphasize that the only actual person mentioned is the villain, "the present King of Great Britain."

When we look a bit more closely, however, we find some features of vocabulary and grammar that are indeed old-fashioned to the point of being archaic. Words like *suffer*, *train*, *reduce*, and *object* are used in ways and with meanings that present-day writers would not use; we would be more likely to say *endure*, *series* or *succession*, *subject*, and

aim. In grammar we note the form *hath*, which was already archaic in 1776, the treatment of *man-kind* as a plural noun (*mankind, are*), and the unusual word order of *Governments long established and pursuing invariably the same Object*. And *shew*, a variant spelling of *show*, long ago passed from common use.

What these various matters of style, vocabulary, and grammar add up to is a slight feeling of strangeness that can be a barrier to full understanding. The cautious reader might feel the need to go to the dictionary to check such words as *transient* and *suffer*. Nor would he expect the modern Congress, no matter how formal the situation, to produce a document quite like this. But he can still accept it as essentially his own language.

We go back another hundred and fifty years for the next example, a selection from a pamphlet written by John Winthrop and others of the Puritan pioneers from their ship, the *Arbella*, which was just about to set out across the ocean to establish Boston and the other settlements of the Massachusetts Bay Colony. The year is 1630, and the document bears a long and quaint title, *The Humble Request of His Maiesties loyall Subjects, the Governour and the Company late gone for New-England; To the rest of their Brethren, in and of the Church of England. For the obtaining of their Prayers and the removall of suspitions, and misconstructions of their Intentions*. Like many seventeenth-century titles, this one is really a summary of what the little pamphlet is about. The colonists are writing to those they are leaving behind, asking for understanding of their motives in leaving their country and their church to set up new settlements and a new church in the New World.

If any there be, who through want of cleare intelligence of our course, or tendernesse of affection towards us, cannot conceive so well of our way as we could desire, we would intreat such not to despise us, nor to desert us in their prayers & affections, but to consider rather, that they are so much the more bound to expresse the bowels of their compassion towards us, remembering alwaies that both Nature and Grace, doth ever binde us to relieve and rescue with our utmost & speediest power, such as are deare unto us, when wee conceive them to be running uncomfortable hazards.

What goodnes you shall extend to us in this or any other Christian kindnesse, wee your Brethren in CHRIST IESVS shall labour to repay in what dutie wee are or shall be able to performe, promising so farre as God shall enable us to give him no rest on your behalves, wishing our heads and hearts may be as fountaines of teares for your everlasting welfare, when wee shall be in our poore Cottages in the wilderness, . . .

Certainly one thing that strikes us here is the complexity of the sentences. The whole passage of 182 words comprises only two sentences; actually the second sentence has been broken off before its end, and runs on in the original for 23 more words. In spite of this, however, its tone is more personal and less abstract than that of the Declaration; the actors are people ("wee" and "you") rather than abstractions like "Prudence" and "necessity". Perhaps because of this more familiar tone, the vocabulary presents relatively few problems, though even in the first clause we realize that *want*, *intelligence*, and *affection* are being used in senses no longer current today—we would say *lack*, *understanding* or *knowledge*, and *feeling* (note that we now use just the word *affection* to mean what is here expressed by *tendernesse of affection*).

In other matters, however, the passage clearly declares itself as older than the Declaration. Even

the spelling, which in our day is strictly standardized, is different, particularly in the matter of putting a final *-e* onto a good many words which we end with a consonant: *cleare*, *expresse*, *binde*, *deare*, *farre*, etc. Other spellings which are no longer current are *alwaies*, *wee*, and *dutie*. But it is probably the combination of grammatical complexity and archaic turns of phrase that gives the passage its antique flavor. A modern translation of the first sentence might go somewhat like this:

If there are any people who, either because of lack of understanding of what we are doing or because of their fondness for us, do not approve our actions as highly as we would like them to, we ask them not to despise us or to give up praying for us and loving us. Instead, they should realize that they have a greater obligation to show us their affection and understanding. They should remember that it is both natural and moral to do our best to help save those we love when we think they are taking dangerous risks. Here the original sentence of 105 words has been broken up into three sentences, much of the complicated sentence-structure has been simplified, and quaint turns of phrase like "the bowels of their compassion" have been put into ordinary modern English. Though the reader may miss the old-fashioned flavor of the original, it is safe to say he is clearer about what is being said.

In spite of the fact that the second of these passages is 340 years old, both of them fall into what linguists call the Modern English period. Our next example, however, goes back another two centuries into what we call Middle English. It is "A Crye Made for a Commune Passage Toward Harefleu," actually a proclamation issued in the name of King Henry V for the assembling of supplies in support of his invasion of France in 1415.

Be ther proclamacioun made, that alle manere of men, marchauntz, artificers, or other, of what estat, degre, or condicioun, that euere they be, that willen toward oure liege lorde the kyng, beyng atte harflewe in the costes of Normandy, that god him spede, with corne, brede, mele, or flour, wyne, ale, or biere, fyssh, flessch or any other viteille, clothe, linnen, wollen or eny merchaundise, shertys, breches, doubletys, hosen, shone, or eny other manere ware of armure,artilrye, or of othere stufte, lette hem appareille and make redy between this and to-day seuenyght their bodyes, goodes, merchaundyses, ware, stofure, viteille, what that euere it be; and in the mene while come to the Mair, and he shall dispose and assigne theym redy shipping and passage vnto the forseide costes. [Text from Chambers & Daunt, *A Book of London English 1384-1425*, Oxford, 1931]

The first thing that the modern reader notices about this passage is undoubtedly the spelling. Just about half the running words are spelled differently from their modern forms. When we consider individual words, the difference is even more striking: only 29 of the 83 different words in the passage are spelled as in modern English. This certainly contributes to the superficial strangeness of the passage, but a closer look reveals that this in itself does not constitute a serious barrier to understanding, since most if not all of the words are easily identified in spite of their different spellings. In most cases the spellings conform to the general rules of modern English, the difference being in the alternatives chosen: thus *spelle*, *mele*; and *mene* are perfectly possible modern spellings but they don't happen to be the accepted ways of spelling *speed*, *meal*, and *mean*. Some spellings, however, seem to indicate pronunciation differences. Thus *shertys* and *doubletys* for *shirts* and *doublets*, and perhaps *costes*

for *coasts*, suggest that the plural ending in these words which end in *-t* was a full syllable, as it is to this day in some regional dialects where *posts* is pronounced as if spelled *postiz*.

Looking at the vocabulary of the proclamation, we find that once we get past the spelling so that we can identify the words, virtually all of them are still current in English. In fact, only *stoffure* ("material used for furnishing, supply, or outfit") is listed as completely obsolete by the Oxford English Dictionary. Nobody wears a *doublet* ("a quilted undergarment reinforced by rings of mail and worn under armor") nowadays, but the word turns up in enough historical fiction to be entered unlabeled in Webster's Third New International Dictionary. (The thing, not the word, is obsolete.) And *seuenyght*, which appears in the same dictionary under its later form *sennight*, is labeled archaic and illustrated by quotations from the seventeenth and eighteenth centuries. Some might wonder at *viteille*, but in its later form *victuals* it is still occasionally used.

If it is another matter, however, when we consider the meanings of the words. A large number of them, including some of the most familiar ones, are used in senses that are either quite infrequent or impossible in modern English. Among these we might list *manere* ('kind'), *artificers* ('craftsmen'), *estat* ('rank'), *spede* ('help, prosper'), *artilrye* ('arms, munitions'), *apparaille* ('prepare'), *to-day seuenyght* ('a week from today'), *dispose* ('order'). Since these are some of the key words in the passage, to give them their usual modern meanings would distort its total meaning quite badly. Once again we are reminded that changes in the meanings of words that remain in the language are probably more important in their effect than the coming in of new words or the passing away of old ones.

Another fact about the vocabulary that we become aware of in studying this passage is that there are two major sources of English words: native English and borrowed Romance. We are reminded that for about two centuries before this proclamation was written it had been quite common for writers and speakers of English, many of whom also knew and used French, to slip French words into their English. Many of these words were taken up by others and eventually naturalized in English. In this passage 23 of the 83 different words, or about 30%, are from French. They include *proclamacioun*, *manere*, *marcauntiz*, *artificers*, *estat*, *degré*, *condicioun*, and so on down to *passage* and *costes*. The native words make up 70% of the vocabulary but 77% of the running words, since many of them are the little grammatical words that are frequently repeated, like *that*, *and*, *or*, *the*, and *other*. Some, however, are important "content" words like *lorde*, *kyng*, *corne*, *ale*, *fyssh*, *wollen*, and *shertys*. Since the language of the proclamation is legalistic and hence rather repetitious, we sometimes find a native word and its French synonym coupled together, as in *apparaille* and *make redy* or *shippyng* and *passage*. But this is probably accidental, since other repetitive strings may be all French words (*dispose* and *assigné*) or mixed (*goodes*, *merchaundyses*, *ware*—native, French, native). It is of some interest to compare the percentages of native and French words in this passage with that in our most recent example, the selection from the Declaration of Independence, in which 48% are native, 42% French, and 9% direct from Latin. Obviously, the habit of borrowing continued during the period of three and a half centuries between Henry V and our founding fathers.

The grammar, too, of this passage is more than a bit strange to the modern reader. The opening phrase is impossible in modern English, even of the

most formal sort; we would have to say "Let there be made a proclamation" or more likely "Let it be proclaimed". Modern English has made a whole new set of indefinite pronouns by tacking *ever* onto *who*, *which*, and *what*; here, as in *of what estat . . . that euer they be*, the *ever* is still a separate adverb. Plural forms like *hosen* and *shone* have gone out; *hose* has become a sort of plural without a singular, like *trousers* and *scissors*, while *shone* has adopted the regular plural ending and become *shoes*. In sum, while the passage is clearly English, the modern reader inexperienced in the Middle English of Chaucer and his contemporaries has difficulties in reading it.

These difficulties increase considerably when we go back another century and a half to 1258. Here is part of a proclamation by another King Henry, the Third, in which he confirms his acceptance of the Provisions of Oxford, a document which a group of barons had forced him to sign in much the same way the Magna Carta had been extracted from King John forty-odd years earlier.

Henri, þurȝ Godes fultume King on Engle-

from Dickens & Wilson, *Early Middle English
Texts*, Cambridge, 1951]

One surprising thing about this document is that it is in English at all, rather than in French, which was the official language of the government at this time. Actually it was promulgated in French as well; the parallel English version is probably the result of a contemporary nationalistic movement to restore English to official use. In any case, the modern reader probably finds the English version as difficult as he would the French. A modern translation might go somewhat as follows:

Henry, by the grace of God King of England, Lord of Ireland, Duke of Normandy and Aquitaine, and Earl of Anjou, sends greetings to all his subjects, both clerical and lay, in Huntingdonshire. You are all to know well that we will and agree that whatever all our councillors, or the majority of them, who have been chosen by us and by the common people in our kingdom have done and shall do, to the honor of God and in fidelity to us, for the benefit of the country by the wisdom of the said councillors, is to be firm and lasting in all respects without end. And we command all our faithful followers by the loyalty that they owe to us to hold firmly and swear to hold and to defend the provisions that have been made and are to be made by the aforesaid councillors, or the majority of them, as is stated above; and [we further command] them to help one another to do so, by virtue of that same oath—to render justice to and receive it from all men.

Once again, spelling is the first obstacle to the

modern reader who attempts to interpret the original. For one thing, there are three strange letters in the alphabet: þ, called 'thorn', which stands for the sounds now spelled *th*; ȝ, called 'yogh', which represents consonantal *y* at the beginning of a word or medially before a stressed vowel, *gh* at the end of a word or before another consonant, and *w* between vowels; and æ, called 'ash', which spells the vowel of modern English *hat*. With these clues it is easier to see that þurȝ is our word *through* or *thorough*, ȝe is the pronoun *ye*, an archaic form of *you*, riȝt is *right*, oȝen is *owe* or *own*, and þæt is *that*. A few more hints help a bit more, such as that *u* and *v* are used interchangeably for both the vowel *u* and the consonant *v*, with *v* appearing at the beginnings of words and *u* in the middle, so that *vre* is *ure* (= *our*); and that *oa* is used to spell an *aw*-type of vowel, as it still is in one word, *broad*.

But even if the spelling were to be completely converted to modern forms, we would still have difficulties with words. A major reason for this is that, although the proclamation was written nearly two centuries after the Norman Conquest, it comes before the great influx of French words into the language. In fact, the same nationalistic motives mentioned above may have led the writer (quite possibly the translator, since it is likely that the French version was written first) to consciously avoid using any French words at all. In any case, except for the title *Duk*, the king's given name *Henri*, and the names of the three French provinces where he claimed feudal title—*Normandi*, *Aquitaine*, and *Aniow*—there are no French words at all in this selection. Instead, the proclamation frequently uses Old English words and phrases that have since been replaced by French synonyms and hence have become obsolete. Some of these, with their modern equivalents, are:

þurȝ Godes fultume	through God's help
holde	subjects, vassals
vnnen	agree
rædesmen	councillors, advisors
moare dæl	larger part, majority
þæt loandes folk	the common people
freme	benefit
hoaten	command
treowþe	loyalty, fidelity
werien	defend, protect
isetnesses	agreements, provisions
foangen	receive

With the exception of *protect* and *defend*, which were taken directly from Latin, and the native word *help*, all the words in the right-hand column are of French origin. It is obvious that what amounted to a virtual revolution in the English vocabulary, especially its more formal layers, took place in the century and a half between Henry III and Henry V.

In grammar as well we find forms and constructions that are no longer current, though here the change has been more gradual. We may observe, for example, the contrast between the ending *-ing*, which marks verbal nouns, and *-ind*, which marks present participles, as in the words *igreteinge* and *ilestinde*. At a somewhat later date, this distinction, which still prevails in modern German, was lost, and the *-ing* ending came to be used for both. This is in a way unfortunate since it can lead to ambiguity, as in *pursuing girls may be fun*—which can mean either 'the pursuit of girls' (verbal noun) or 'girls who pursue' (participle). Another grammatical marker that has since disappeared is the prefix *i-*, descended from an earlier *ge-*, which frequently appears with past participles, as in *idon*, *imakede*, and *iseid*. This prefix *ge-* has also survived in modern German. For the most part the word order is not far different from that

of modern English, as comparison of the original with the translation will show. But word order such as *alc oþer helpe þæt for to done* ('each the other help that for to do'), with two instances of the direct object coming before the verb, has to be changed to *each help the other to do that to* accord with modern grammar.

All these things—strange spelling, often reflecting a quite different pronunciation, obsolete words, and grammatical differences—add up to making the language of this passage seem like a foreign language, though paradoxically its freedom from French words makes it very pure English for its time. By the time we take another giant step backward, this time of nearly two and a half centuries, we are indeed dealing with an almost wholly unfamiliar language, in spite of the fact that we can trace an unbroken tradition of nearly a thousand years down to our own time. Linguists call this language OLD ENGLISH or ANGLO-SAXON. Here is part of another royal document, a writ, dated 1020, of King Cnut (or Canute, as he is more commonly known), a Danish Viking who was king of England for twenty years (1016–35) and of Denmark and Norway for shorter periods. He had just returned to England from a successful expedition to Denmark to make good his claim to the throne there, and put out this writ to reassure the English people of his intent to keep the peace. As a Dane, it is quite likely that he did not himself speak English, but had this document written by some clerk of his household. Also, in spite of his pagan background he had become a Christian, a fact which he emphasizes strongly in this document.

Cnut cýning gret his arcebiscepas and his leod-biscepas and Þurcyl eorl and ealle his eorlas and ealne his beodscype, twelfhynde and twyhynde, gehadode and læwede, on Englalande freondlice. And ic cyðe eow, þæt ic wylle beon hold hlaford and unswicende to godes gerihtum and to rihte woroldlage.

ic nam me to gemynde þa gewritu and þa word, þe se arcebisceop Lyfing me fram þam papan brohte of Rome, þæt ic scolde æghwær godes lof upp aræran and unriht aleggian and full frið wyrcean be ðære mihte, þe me god syllan wolde.

Nu ne wandode ic na minum sceattum, þa hwile þe eow unfrið on handa stod: nu ic mid godes fultume þæt totwæmde mid minum scattum. Ða cydde man me, þæt us mara hearm to fundode, þonne us wel licode: and þa for ic me sylf mid þam mannum þe me mid foron into Denmearecon, þe eow mæst hearm of com: and þæt hæbbe mid godes fultume forene forfangen, þæt eow næfre heonon forð þanon nan unfrið to ne cymð, þa hwile þe ge me rihtlice healdað and min lif byð. [Text from Kaiser, *Medieval English*, Berlin, 1958]

There is no doubt about this being virtually as strange as a foreign language. Only a few words—mostly pronouns and other function words—look like their modern descendants: *his*, *and*, *on*, *to*, *me*, *us*, *into*. There is another new character, ð, called 'edh', which is in variation with þ as a means of writing the sounds we spell with *th*. Even a full understanding of the spelling conventions would not help the modern reader very much. He cannot understand it without a translation, which might go as follows:

Canute the king greets his archbishops, and his provincial bishops and Earl Thurcyll and all his earls and all his people, rich and poor, ordained and lay, in England, in friendly fashion. And I assure you that I wish to be a gracious lord and devoted to the laws of God and to just human law.

I have remembered the writs and the words that Archbishop Lyfing brought me from the Pope of Rome, [to the effect] that I should in all ways support the praise of God and put down injustice and promote perfect peace to the extent of the strength

that God would grant me.

I have never spared my wealth as long as discord was among you; now with God's help I have dispersed it [discord] with my wealth. When I was informed that more affliction had come upon us than we could put up with, then I went myself to Denmark with those men who caused you the most injury; and with God's help I have now seen to it that from this time on no breach of the peace will ever come to you from that source, so long as you obey me properly and my life endures.

With the exception of the ecclesiastical titles *arcebiscop* and *leodbiscop* and the Danish names *Cnut* and *Thurcyl*, the vocabulary here is totally English. Many of the words have survived into modern English, with changes in spelling that reflect changes in pronunciation: *cynung* (king), *hlaford* (lord), *brohte* (brought), *scolde* (should), *licode* (lied), *rihtlice* (rightly), etc. But many have become obsolete during the nine and a half centuries since this was written. *þeodscype* ('people'), *cyðe*, past *cydde* ('make known'), *unswicende* ('unyielding'), *lof* ('praise'), *frið* ('peace'), *wandode*, from *wandian* ('hesitate, omit'), etc. Of the 96 different words in the passage, 31 are now obsolete and 7 more have undergone rather drastic changes of meaning, so that even if the reader knew enough about Old English spelling to recognize the survivors, he would have to go to a dictionary of Old English for the meanings of 40% of the words.

In terms of grammar also, this English of 1020 shows more clearly its affiliation with the other Germanic languages. As in modern German, not only nouns but adjectives and even the definite article are INFLECTED, that is, they have special endings indicating the case, number, and sometimes gender. Some examples illustrating this:

se arcebiscop	'the archbishop'	masculine singular nominative
þam papan	'the pope'	masculine singular dative
ðære mihte	'the might'	feminine singular dative
þa gewritu	'the writs'	neuter plural accusative
þam mannum	'the men'	masculine plural dative
calle his eorlas	'all his earls'	masculine plural accusative
ealne his þeodscype	'all his people'	masculine singular accusative
min lif	'my life'	neuter singular nominative
minum sceattum	'my treasures'	masculine plural dative

Verbs also have inflections, many of which have survived into modern English. We still have the distinction between STRONG verbs—those that form the past tense by changing the stem vowel—and WEAK verbs—those that add an ending containing a *d* or *t*.⁴ The following are some forms from this passage illustrating these two types:

Strong past tense forms

nam, from niman, 'take'
stod, from standan, 'stand'
for (sing.) and foron (plural) from faran, 'go, travel'
com, from cuman, 'come'

Weak past tense forms

brohte, from bringan, 'bring'
wandode, from wandian, 'omit, neglect'
totwæmde, from totwæman, 'break up, scatter'
cydde, from cyðan, 'proclaim, make known'

In another important grammatical feature, the order of the elements in constructions, this passage shows many differences from modern English. In fact, only the subject-verb-object order of main clauses, as in *Cnut cynung gret his arcebiscopas*, is the same as ours. This is inverted if an adverb begins the sentence, as in *þa for ic* 'then went I.' This inversion survives today with only a few adverbs, such as *never* and *seldom*. The order in subordinate clauses, however, is quite different from ours. Here the rule is that the verb comes at the end of the clause, which makes the other elements come in an order that seems very unnatural to us, especially when it is combined with the practice of putting prepositions after their objects, often with other elements in between. All this is illustrated by *þe eow mast hearf of com* ('whom to you most harm from came') and *þæt eow næfre heonon forð þanon nan unfrið to ne cymð* ('that you never hence forth thence no war to not comes'), where *eow* is the object of the preposition *to*, which doesn't come until seven words later. This last clause also illustrates the manner of emphasizing negation by multiple negative forms, which is still common in substandard speech ("I ain't never had no luck") but is generally considered unacceptable in standard English.

Many more points of difference could be found by further analysis of this passage, but this is enough to show that when we trace English back as much as two-thirds of its 1500-year history we discover that it has many of the features which we associate with a foreign language. In fact, we could only continue our backward journey by means of written texts about three centuries farther. After that we would come to a time when English was rarely or never written down, and we would have to depend on the various ingenious indirect methods which philologists use to reconstruct the unwritten early stages of the history of a language. By these methods we could push our horizon back to the time, about the beginning of the Christian era, when English was not a separate language at all but simply one of the dialects of the common Germanic language of northern Europe. By even more ingenious methods, involving comparison with other language families like Celtic, Slavic, Indic, Latin, and Greek, we can go back another two or three thousand years and draw hypothetical inferences about the common Indo-European tongue from which most of the languages of Europe ultimately derive. That is as far as we can go. Tens, perhaps hundreds, of thousands of years of the history of our language are irretrievably lost in the mists of time.

⁴ Some weak verbs such as *deal*—*dealt* and *creep*—*crept* also show vowel change in the past, but this is due to vowel shortening in Middle English, much later than the vowel shifts in strong verbs which go back to Proto-Germanic.

TABULAR HISTORY OF THE ENGLISH LANGUAGE

Date & Period	Historical Events	Linguistic Events
About 3000 B.C. Proto-Indo-European	Neolithic Age. Indo-Europeans living in north central Europe.	Indo-European undifferentiated, except dialectally.
3000-500 B.C. Indo-European Proto-Germanic	Extensive migrations of Indo-European speakers to India, Greece, and western Europe.	Differentiation of Indo-European language families, including Germanic. Earliest documents in Sanskrit, Greek, etc.
500-0 B.C. Germanic	Celts in Britain. Contact of Roman Empire with Germanic peoples.	Germanic undifferentiated, except dialectally. First borrowings from Latin.
0-300 A.D. West Germanic	Expansion and power of Roman Empire. Romanization of Britain. Growth and migrations of Germanic tribes.	Differentiation of West, North, and East branches of Germanic. Continued Latin borrowings
300-500 Proto Old English	Breakup of Roman Empire. Anglo-Saxon invasions of Britain.	Beginnings of differentiation of 'Vulgar Latin. Emergence of Old English. Contact with Celts. Oldest Germanic documents (Gothic Bible c. 350).
500-700 Early Old English	Conversion of Anglo-Saxons. Northumbrian culture. Earliest surviving literature.	Borrowings from Latin and occasionally Celtic. Increased diversity of dialects. Adoption of alphabet.
700-1000 Old English	Danish and Norse/raids and invasions. Alfred and the political ascendancy of Wessex. Establishment of the Danelaw. Cynewulf, Aelfric, and other writers	West Saxon dominant dialect. More Latin borrowings. Development of Old French and other Romance languages.
1000-1150 Late Old English	Viking raids; Danish kings of England. Norman Conquest. Replacement of native ruling class by French speakers.	Extensive borrowings from Norse, especially in the North. French the official language. English "submerged" Further differentiation of dialects.
1150-1300 Early Middle English	Gradual loss of continental possessions of English kings. Continued dominance of French speakers in politics, law, church. Beginnings of revival of literature in English.	Breakdown and loss of Old English inflections. Extensive phonological and syntactic changes. Borrowings from French (Anglo-Norman).
1300-1475 Middle English	Hundred Years' War. Growth of nationalism; decay of feudalism. Chaucer, Gower, Langland, "Gawain Poet", Wyclif. Mystery and Morality plays.	Emergence of English (dialect of London) as the standard literary and official language Extensive borrowings from French.
1475-1650 Early/Modern English	Caxton and printing. Renaissance humanism; revived study of Greek and Latin classics. Spenser, Shakespeare, Milton, biblical translations. Age of discovery and exploration.	Great vowel shift and loss of final -e. Beginning of standardized spelling. Extensive borrowings from Latin, some from Greek. Changes in grammar, especially verb system.
1650-1800 Later Modern English	Settlement of America and growth of British Empire. Opening of India and the Orient. Beginnings of industrial and scientific revolutions. Augustan age and Enlightenment.	Development of American and other colonial dialects. Spread of English around the world; borrowings from many languages. Johnson's Dictionary. Prescriptive grammarians (Lowth).
1800- Recent and Present-Day English	Independence and expansion of U.S. General education and literacy. Acceleration of scientific, industrial, and technological research and development. Journalism, telephone, radio, motion pictures, television.	Growth of scientific and technical vocabularies. English as dominant world language. Development of linguistics. Oxford, Century, and Merriam-Webster dictionaries. Extensive study and teaching of grammar.

ac-e-tone \ä-'sə-tōn-,ē-,ē\ *n* [G *azeton*, fr L *acetum*]: a volatile flammable liquid ketone C₃H₆O used chiefly as a solvent and in organic synthesis and found abnormally in urine — **ac-e-ton-ic** \ä-'sə-tān-īk\ *adj*

ac-to-phen-et-il-din \ä-'sə-tə-'fēn-'et-əd-ən-,ē-,ē\ *n* [ISV]: a white crystalline compound C₁₀H₁₁NO₂ that is used to ease pain or fever

ac-e-tous \ä-'sə-təs\ *adj*: relating to or producing vinegar; also: **SOUR**; **VINEGAR**

ac-etyl \ä-'sə-tī-,ē-,ē\ *n*: the radical CH₃CO of acetic acid

ac-etyl-ate \ä-'sə-tī-,ē-,ē\ *vi* **-lated**, **-lat-ing**: to introduce the acetyl radical into (a compound) — **ac-etyl-a-tion** \-sə-tī-'ā-shən\ *n* — **ac-etyl-a-tive** \-sə-tī-'ā-tīv\ *adj*

ac-etyl-cho-line \ä-'sə-tī-'kō-lēn\ *n* [ISV]: a compound C₈H₁₇NO₂ released at autonomic nerve endings, active in the transmission of the nerve impulse, and formed enzymatically in the tissues from choline — **ac-etyl-cho-lin-ic** \-kō-'līn-īk\ *adj*

ac-etyl-cho-lin-ester-ase \-kō-lā-'nes-tā-rās-,ē-,ē\ *n* [*acetylcholine* + *esterase*]: an enzyme that promotes the hydrolysis of acetylcholine

ac-etyl-coA \ä-'sə-tī-'kō-'ä\ *n*: **ACETYL COENZYME A**

acetyl coenzyme A *n*: a compound C₂₃H₃₇N₇O₁₇P₃S formed as an intermediate in metabolism and active as a coenzyme in biological acetylations

ac-etyl-ene \ä-'sə-tī-'ēn-,ē-,ē\ *n*: a colorless gaseous hydrocarbon HC≡CH made esp by the action of water on calcium carbide and used chiefly in organic synthesis and as a fuel (as in welding and soldering) — **ac-etyl-en-ic** \-sə-tī-'ē-nīk-,ē-,ē\ *adj*

ac-etyl-sal-icy-late \ä-'sə-tī-'sāl-ī-sē-'lāt-,ē-,ē\ *n*: a salt or ester of acetylsalicylic acid

ac-etyl-sal-icy-l-ic acid \ä-'sə-tī-'sāl-ī-sē-'īk-,ē-,ē\ *n* [ISV]: **ASPIRIN**

Acha-tes \ä-'kāt-əs\ *n* [L]: 1: a faithful companion of Aeneas in Vergil's *Aeneid* 2: a faithful friend

ache \äk\ *vi* **ached**; **ach-ing** [ME *achen*, fr OE *acan*, akin to LG *achen* to hurt] 1 *a*: to suffer a usual dull persistent pain 2 *b*: to become distressed or disturbed (as with anxiety or regret) 3 *c*: to feel compassion 2: to become filled with painful yearning — **ach-ing-ly** \ä-'kīŋ-lē\ *adv*

ache *n*: a usual dull persistent pain 2: a condition marked by aching

ache-ne \ə-'kēn\ *n* [NL *achaeulum*, fr *a-* + Gk *chainēin* to yawn — more at **YAWN**]: a small dry indehiscent one-seeded fruit developing from a simple ovary and usu having a thin pericarp attached to the seed at only one point — **ach-e-nal** \ä-'kē-nē-əl\ *adj*

Acher-on \ä-'kə-rən-,ē-,ē\ *n* [Gk *Acherōn*]: a river in Hades

Acheu-le-an or **Acheu-li-an** \ä-'shū-lē-'ān\ *adj* [F *Acheuleen*, fr St *Acheul*, near Amiens, France]: of or relating to a lower Paleolithic culture characterized by bifacial tools with round cutting edges

à che-val \ä-'shə-'vāl\ *adv* [F, lit., on horseback] 1: with a leg on each side: **ASTRIDE** 2: in such a way as to straddle a line on the layout of a game of chance (as roulette) or be split between two numbers, cards, or events

achieve \ə-'chēv\ *vb* **achieved**, **achiev-ing** [ME *acheven*, fr MF *achever* to finish, fr *a-* (fr L *ad-*) + *chief* end, head — more at **CHIEF**] *vi* 1: to carry out successfully: **ACCOMPLISH** (~ a low unemployment rate) 2: to get as the result of exertion: **WIN** (~ greatness) ~ *vt*: to attain a desired end or aim *syn* see **PERFORM**

achieve-ment \ə-'chēv-mənt\ *n*: **ACHIEVEMENT**

achieve-ment \ə-'chēv-mənt\ *n*: 1: the act of achieving: successful completion 2: **ACCOMPLISHMENT** 2 *a*: a result brought about by resolve, persistence, or endeavor 2 *b*: a great or heroic deed 3: the quality and quantity of a student's work *syn* see **FEAT**

Achil-lees \ə-'kīl-ēz\ *n* [L, fr Gk *Achilleus*]: the greatest warrior among the Greeks at Troy and slayer of Hector

Achil-lees' heel *n* [fr the story that Achilles was vulnerable only in the heel]: a vulnerable point

Achil-lees tendon *n*: the strong tendon joining the muscles in the calf of the leg to the bone of the heel

achil-my-de-ous \ä-'kīl-'mīd-ē-əs-,ē-,ē\ *adj* [*a-* + Gk *chilamys*, *chilamys* mantle]: lacking both calyx and corolla

achlor-hy-dric \ä-'klōr-'hīd-rē-,ē-,ē\ *n* [NL, fr *a-* + *chlōrōn* + *hydrogen*]: absence of hydrochloric acid from the gastric juice

— **achlor-hy-dric** \-hīd-rīk-,ē-,ē\ *adj*

act-inic ray n: a radiation having marked photochemical action

act-inide \ˈāk-tə-nid\ *n* [ISV]: any element in a series of elements of increasing atomic numbers beginning with actinium (89) or

a about b kitten c further d back e bake f cot, cart
g out h chin i less j easy k gift l trip m life
n joke o sing p flow q flaw r coin s thin t thus
u loot v foot w yet x few y furious z vision

thorium (90) and ending with element of atomic numbr 103 — see PERIODIC TABLE table

ac-ti-nism \ak-ti-niz-əm/ *n* : the property of radiant energy esp. in the visible and ultraviolet spectral regions by which chemical changes are produced

ac-ti-n-um \ak-tin-əm/ *n* [NL] : a radioactive trivalent metallic element that resembles lanthanum in chemical properties and that is found esp. in pitchblende — see ELEMENT table

ac-ti-no-olite \ak-tin-ō-līt/ *n* : a bright or grayish green amphibole occurring in fibrous, radiated, or columnar forms

ac-ti-no-m-e-ter \ak-ti-nam-ət-ər/ *n* : 1 : an instrument for measuring the direct heating power of the sun's rays 2 : an instrument for measuring the actinic power of radiant energy or for determining photographic exposure to be given — **ac-ti-no-m-e-tric** \-nō-mē-trik/ *adj* — **ac-ti-no-m-e-try** \-nām-ō-trē/ *n*

ac-ti-no-mor-phic \ak-ti-nō-mōr-fik/ *adj* also **ac-ti-no-mor-phous** \-fəs/ *adj* [ISV] : being radially symmetrical and capable of division into essentially symmetrical halves by any longitudinal plane passing through the axis — **ac-ti-no-mor-phy** \ak-ti-nō-mōr-fē/ *n*

ac-ti-no-my-ces \ak-ti-nō-mī-sē/ *n*, *pl* actinomycetes [NL, genus name, fr. *actin-* + Gk *mykē*, mykēs fungus; akin to Gk *myxa* mucus — more at MUCUS] : any of a genus (Actinomycetes) of filamentous bacteria including both soil-inhabiting saprophytes and disease-producing parasites — **ac-ti-no-my-cet-al** \-mī-sēt-əl/ *adj*

ac-ti-no-my-cete \ak-ti-nō-mī-sēt, -mī-sēt/ *n* [deriv. of Gk *aktin-*, *aktis* + *mykē*, *mykēs*] : any of an order (Actinomycetales) of filamentous or rod-shaped bacteria including the actinomycetes and streptomycetes — **ac-ti-no-my-cet-ous** \-mī-sēt-s/ *adj*

ac-ti-no-my-clin \ak-ti-nō-mīs-n/ *n* : any of various red or yellow-red mostly toxic polypeptide antibiotics isolated from soil bacteria (esp. *Streptomyces antibioticus*)

ac-ti-no-my-co-sis \ak-ti-nō-mī-kō-sis/ *n* : infection with or disease caused by actinomycetes, esp. : a chronic disease of cattle, swine, and man characterized by hard granulomatous masses usu. in mouth and jaw — **ac-ti-no-my-co-tic** \-kāt-ik/ *adj*

ac-ti-non \ak-ti-nān/ *n* [NL, fr. *actinium*] : a gaseous radioactive isotope of radon that has a half-life of about 4 seconds

ac-ti-no-ur-a-ni-um \ak-ti-nō-yū-rā-nē-əm/ *n* [NL, fr. *actinium* + *uranium*] : the uranium isotope of mass 235

ac-ti-no-zo-an \-nō-zō-ən/ *n* [actin- + Gk *zōon* animal, akin to Gk *zōē* life — more at QUICK] : ANTHOZOAN — **actinozoan** *adj*

ac-tion \ak-shən/ *n* : 1 : a proceeding in a court of justice by which one demands or enforces one's right 2 : the bringing about of an alteration by force or through a natural agency 3 : the manner or method of performing 4 : the deportment of an actor or speaker or his expression by means of attitude, voice, and gesture 5 : the style of movement of the feet and legs (as of a horse) 6 : a function of the body or one of its parts 7 : an act of will 8 : a thing accomplished usu. over a period of time, in stages, or with the possibility of repetition (an ~, the product and expression of exerted force — Thomas Carlyle) 9 : *pl* : BEHAVIOR, CONDUCT (somber ~s) 10 : INITIATIVE, ENTERPRISE (a man of ~) 11 : (1) : an engagement between troops or ships (2) : combat in war (gallantry in ~) 12 : (1) : an event or series of events forming a literary composition (2) : the unfolding of the events of a drama or work of fiction : PLOT (3) : the movement of incidents in a plot 13 : the combination of circumstances that constitute the subject matter of a painting or sculpture 14 : an operating mechanism 15 : the manner in which a mechanism operates 16 : the price movement and trading volume of a commodity, security, or market 17 : the process of betting including the offering and acceptance of a bet and determination of a winner 18 : the most vigorous, productive, or exciting activity in a particular field, area, or group (they itch to go where the ~ is — D. J. Henahan)

syn 1 ACTION, ACT, DEED *shared meaning element* : something done or effected

2 see BATTLE

ac-tion-able \ak-sh(ə)-nə-bəl/ *adj* : subject to or affording ground for an action or suit at law — **ac-tion-ably** \-blē/ *adv*

ac-tion-less \ak-shən-ləs/ *adj* : marked by inaction : IMMOBILE

action painting *n* : abstract expressionism marked esp. by the use of spontaneous techniques (as dribbling, splattering, or smearing)

action potential *n* : a recorded change in potential (as between the inside of a nerve cell and the extracellular medium) during activity of a cell or tissue

ac-ti-vate \ak-ti-vāt/ *vb* -vated; -vating *vt* : to make active or more active as 1 : to make (as molecules) reactive or more reactive 2 : to convert (as a provitamin) into a biologically active derivative 3 : to make (a substance) radioactive, luminescent, photosensitive, or photoconductive 4 : to treat (as carbon or alumina) esp. so as to improve adsorptive properties 5 : to aerate (sewage) so as to favor the growth of organisms that decompose organic matter 6 : to set up or formally institute (as a military unit) with the necessary personnel and equipment 7 : to put (an individual or unit) on active duty 8 : to become active **syn** see VITALIZE

ac-ti-vat-ion \ak-ti-vā-shən/ *n* — **ac-ti-vat-or** \ak-ti-vāt-ər/ *n*

activated carbon *n* : a highly adsorbent powdered or granular carbon made usu. by carbonization and chemical activation and used chiefly for purifying by adsorption — called also *activated charcoal*

activation analysis *n* : analysis to determine chemical elements in a material by bombarding it with neutrons to produce radioactive atoms whose radiations are characteristic of the elements present

ac-tive \ak-tiv/ *adj* [ME, fr. MF or L; MF *actif*, fr. L *activus*, fr. *actus*, pp. of *agere* to drive, do — more at AGENT] 1 : characterized by action rather than by contemplation or speculation 2 : productive of action or movement 3 : *a of a verb form or voice* : asserting that the person or thing represented by the grammatical subject performs the action represented by the verb (his in "he hits the ball" is ~) 4 : expressing action as distinct from mere existence or state 5 : quick in physical movement : LIVELY 6 : marked by vigorous activity : BUSY (the stock market was ~) 7 : requiring vigorous action or exertion (~ spc'z) 8 : having

practical operation or results : EFFECTIVE (an ~ law) 9 : disposed to action : ENERGETIC (~ interest) 10 : engaged in an action or activity : PARTICIPATING (an ~ club member) 11 : engaged in full-time service esp. in the armed forces (~ duty) 12 : marked by present operation, transaction, movement, or use (~ account) 13 : capable of acting or reacting : ACTIVATED (~ nitrogen) (~ charcoal) 14 : tending to progress or to cause degeneration (~ tuberculosis) 15 : exhibiting optical activity 16 : still eligible to win the pot in poker 17 : moving down the line : visiting in the set ~ used of couples in contradances or square dances — **ac-tive** *adv* — **ac-tive-ness** *n*

active immunity *n* : usu. long-lasting immunity that is acquired through production of antibodies within the organism in response to the presence of antigens — compare PASSIVE IMMUNITY

1 See ALEPH, BETH, etc., in the vocabulary. Where two forms of a letter are given, the one at the right is the form used at the end of a word

2 Not represented in transliteration when initial. 3 The left column shows the form of each Arabic letter that is used when it stands alone, the second column its form when it is joined to the preceding letter, the third column its form when it is joined to both the preceding and the following letter, and the right column its form when it is joined to the following letter only. In the names of the Arabic letters, ā, l, and u respectively are pronounced like a in *father*, l in *machine*, u in *rude*. 4 Hebrew and Arabic are written from right to left. The Hebrew and Arabic letters are all primarily consonants; a few of them are also used secondarily to represent certain vowels, but full indication of vowels, when provided at all, is by means of a system of dots or strokes adjacent to the consonantal characters. 5 Alif represents no sound in itself, but is used principally as an indicator of the presence of a glottal stop (transliterated ' medially and finally; not represented in transliteration when initial) and as the sign of a long a. 6 When š has two dots above it (š), it is called šā marbūta and, if it immediately precedes a vowel, is transliterated t instead of h. 7 See ALPHA, BETA, GAMMA, etc., in the vocabulary. The letter gamma is transliterated n only before velars, the letter upsilon is transliterated u only as the final element in diphthongs. 8 See CYRILLIC in the vocabulary. 9 This sign indicates that the immediately preceding consonant is not palatalized even though immediately followed by a palatal vowel. 10 This sign indicates that the immediately preceding consonant is palatalized even though not immediately followed by a palatal vowel. 11 The alphabet shown here is the Devanagari. When vowels are combined with preceding consonants they are indicated by various strokes or hooks instead of by the signs here given, or, in the case of short a, not written at all. Thus the character क represents ka, the character का, kā, the character कि, ki, the character की, kī, the character कु, ku; the character कू, kū, the character कृ, kṛ, the character क्य, ky, the character क्य, ky; the character के, ke; the character कै, kai; the character को, ko, the character कौ, kau, and the character क्, k without any following vowel. There are also many compound characters representing combinations of two or more consonants

- atoll** \ə-ˈtɒl, -ˈtɒl, -ˈtɒl, -ˈtɒl/ *n* [atolu, native name in the Maldives islands]: a coral island consisting of a reef surrounding a lagoon

atoll

minute indivisible particles of which according to ancient materialism the universe is composed 2: a tiny particle: **BT** 3 **a**: the smallest particle of an element that can exist either alone or in combination **b**: a group of such particles constituting the smallest quantity of a radical 4: the atom considered as a source of vast potential energy

atom bomb *n*: 1: a bomb whose violent explosive power is due to the sudden release of atomic energy resulting from the splitting of nuclei of a heavy chemical element (as plutonium or uranium) by neutrons in a very rapid chain reaction — called also *atomic bomb*, *fixation bomb* 2: a bomb whose explosive power is due to the release of atomic energy — **atom-bomb** *vt*

atom-ic \ə-'tām-ik/ *adj* 1: of, relating to, or concerned with atoms, atomic energy, or atomic bombs 2: **MINUTE** 3: of a chemical element: existing in the state of separate atoms — **atom-i-cal-ly** \-i-'k(ə)-lē/ *adv*

atomic clock *n*: a precision clock that depends for its operation on an electrical oscillator regulated by the natural vibration frequencies of an atomic system (as a beam of cesium atoms)

atomic cocktail *n*: a radioactive substance (as iodine of sodium) dissolved in water and administered orally to patients with cancer

atomic energy *n*: energy that can be liberated by changes in the nucleus of an atom (as by fission of a heavy nucleus or fusion of light nuclei into heavier ones with accompanying loss of mass)

at-o-mic-i-ty \ə-'tā-mis-ē-ē/ *n* 1 **a**: **VALENCE** **b**: the number of atoms in the molecule of an element **c**: the number of replaceable atoms or groups in the molecule of a compound 2: the state of consisting of atoms

atomic mass *n*: the mass of any species of atom usu. expressed in atomic mass units

atomic mass unit *n*: a unit of mass for expressing masses of atoms, molecules, or nuclear particles equal to $1/12$ of the atomic mass of the most abundant carbon isotope ^{12}C

atomic number *n*: an experimentally determined number characteristic of a chemical element that represents the number of protons in the nucleus which in a neutral atom equals the number of electrons outside the nucleus and that determines the place of the element in the periodic table — see **ELEMENT** table

atomic pile *n*: **REACTOR** 3b — called also *atomic reactor*

atom-ics \ə-'tām-iks/ *n pl* but *sing in constr.* the science of atoms esp. when involving atomic energy

atomic theory *n*: 1: a theory of the nature of matter: all material substances are composed of minute particles or atoms of a comparatively small number of kinds and all the atoms of the same kind are uniform in size, weight, and other properties — called also *atomic hypothesis* 2: any of several theories of the structure of the atom, esp.: one based on experimentation and theoretical considerations holding that the atom is composed essentially of a small positively charged comparatively heavy nucleus surrounded by a comparatively large arrangement of electrons

atomic weight *n*: the average relative weight of an element referred to some element taken as a standard with oxygen of atomic weight 16 or usu. with carbon of atomic weight 12 being taken as a basis — see **ELEMENT** table

atom-ism \ə-'tā-miz-əm/ *n*: a doctrine that the universe is composed of simple indivisible minute particles — **atom-ist** \-māst/ *n*

at-om-is-tic \ə-'tā-mis-tik/ *adj* 1: of or relating to atoms or atomism 2: composed of many simple elements, also: divided into unconnected or antagonistic fragments (an ~ society) — **at-om-is-ti-cal-ly** \-i-'k(ə)-lē/ *adv*

at-om-is-tics \-tik-s/ *n pl* but *sing in constr.* a science dealing with the atom or with the use of atomic energy

atom-ize \ə-'tā-miz/ *v* -ized, -izing 1: to reduce to minute particles or to a fine spray 2: to treat as made up of many discrete units 3: to subject to atomic bombing — **atom-iza-tion** \ə-'tā-miz-ā-shən/ *n*

atom-izer \ə-'tā-mī-zər/ *n*: an instrument for atomizing usu. a perfume, disinfectant, or medication

atom smasher *n*: **ACCELERATOR** **d**

at-o-my \ə-'tā-mē/ *n pl* -mies [irreg fr *L atomi*, pl of *atomus* atom] a tiny particle **ATOM** **MITE**

aton-al \('ā-'tōn-'l, ('ā-'d) *adj* marked by avoidance of traditional musical tonality, esp.: organized without reference to key or tonal center and using the tones of the chromatic scale impartially — **aton-al-ism** \-'l-iz-əm/ *n* — **aton-al-ist** \-'l-ist/ *n* — **aton-al-is-tic** \-'l-ist-ik, -'is-tik, -'is-tik/ *adj* — **aton-al-i-ty** \ā-'tōn-'l-ē-ē, -'is-tē-ē/ *n* — **aton-al-ly** \('ā-'tōn-'l-ē, ('ā-'d) *adv*

syn SCOTCH, SCOTTISH, SCOTS *shared meaning element*: constituting, belonging to, or deriving from Scotland or its people. SCOTCH is more widely used outside Scotland and is likely to occur in casual context or in the spoken language (we referred to ourselves as Scotch and not Scots). When, years later, I learned that the usage was different it seemed to me rather an affliction — J. K. Galbraith. SCOTTISH has a more literary, less casual flavor and use (the Scottish Universities) (when Mary assumed the Scottish crown). SCOTS, otherwise interchangeable with SCOTTISH, may be preferred in reference to law and in historical reference to money (a pound Scots). In Scotland itself SCOTTISH and SCOTS are often preferred to SCOTCH (a delegation of Scottish editors — *Scotsman*) (the Scots community in New York — *Scotsman*) but SCOTCH is also used (I'm pure Scotch — the correct term is Scottish, but that sounds so pompous — Margaret, Duchess of Argyll).
